M3: Standups

How is the Daily Update report most commonly used in Standups?
[✔] To help the team quickly surface discussions around code-level blockers.
[ ] To find team collaboration patterns.
[ ] To visualize commit, ticket, and PR activity in one unified view.

What does the *Review Workflow* report show?
[ ] A visualization of team work patterns over time.
[✔] A unified view of all the team's open PRs over the selected time period.
[ ] A set of metrics that give a high-level view of how the team is leveraging the code review process.

What are the defining characteristics of high-activity pull requests?
[✔] PRs that are seeing a lively discussion, likely with a number of reviewers participating, but the discussion has continued for a while and doesn't seem to be driving toward a resolution.
[ ] PRs that are larger in size, with a higher level of *Review Coverage*.
[ ] PRs that have a higher than average number of follow-on commits.

What are the defining characteristics of long-running pull requests?
[ ] PRs that were submitted near the end of a sprint after the main PR was approved.
[✔] PRs that have been open for a while, where there was some back-and-forth discussion between team members that was followed by silence.
[ ] PRs that have been open for a while but haven't received any comments or an approval.
