Edit Kaltura Videos

Trim videos to remove content from video’s beginning and end. Instead of creating a new video—as seen in creating a clip from a video—trimming a video shortens the original video.

Get Started

Trimming shortens a video without creating a whole new clip.

1. Login to Kaltura and select My Media beneath in the dropdown menu below your name.

2. Select Edit next to the video’s title that you would like to trim.

3. Select the Trim Video tab beneath the video and complete one of the sections below.

Trim Video Using Start and End Times

1. Enter the desired start and end times in the appropriate textboxes.

2. Click Preview at the bottom of the page.

3. Click Trim Video if satisfied with the preview.

4. Click Trim Video in the dialogue box that appears.

NOTE: Trimming a video replaces the original media.

Trim Video Using Timeline

1. Click the icon in the gray field below the video to view the timeline.

NOTE: You may need to update Adobe Flash Player before using this feature.
2. Click and drag the marker to the desired start time. Click **Set Starting Point**. The portion of the timeline left of the marker will be removed.

3. Click and drag the marker to the desired end time. Click **Set Ending Point**. The portion of the timeline to the right of the marker will be removed.

4. Click **Preview** to view the changes made to the video.

5. Click **Trim Video** at the bottom of the page.

6. Click **Trim Video** in the dialogue box that appears.

---

**Trim Video Using Duration Endpoints**

1. Click the icon in the gray field below the video to view the timeline.

2. Click and drag the white brackets at the beginning and the end of the timeline until the video is the desired length.

3. Click **Preview** to view the changes made to the video.

4. Click **Trim Video** at the bottom of the page.

5. Click **Trim Video** in the dialogue box that appears.
