

PNMsoft's Next Generation *HotChange®* Technology

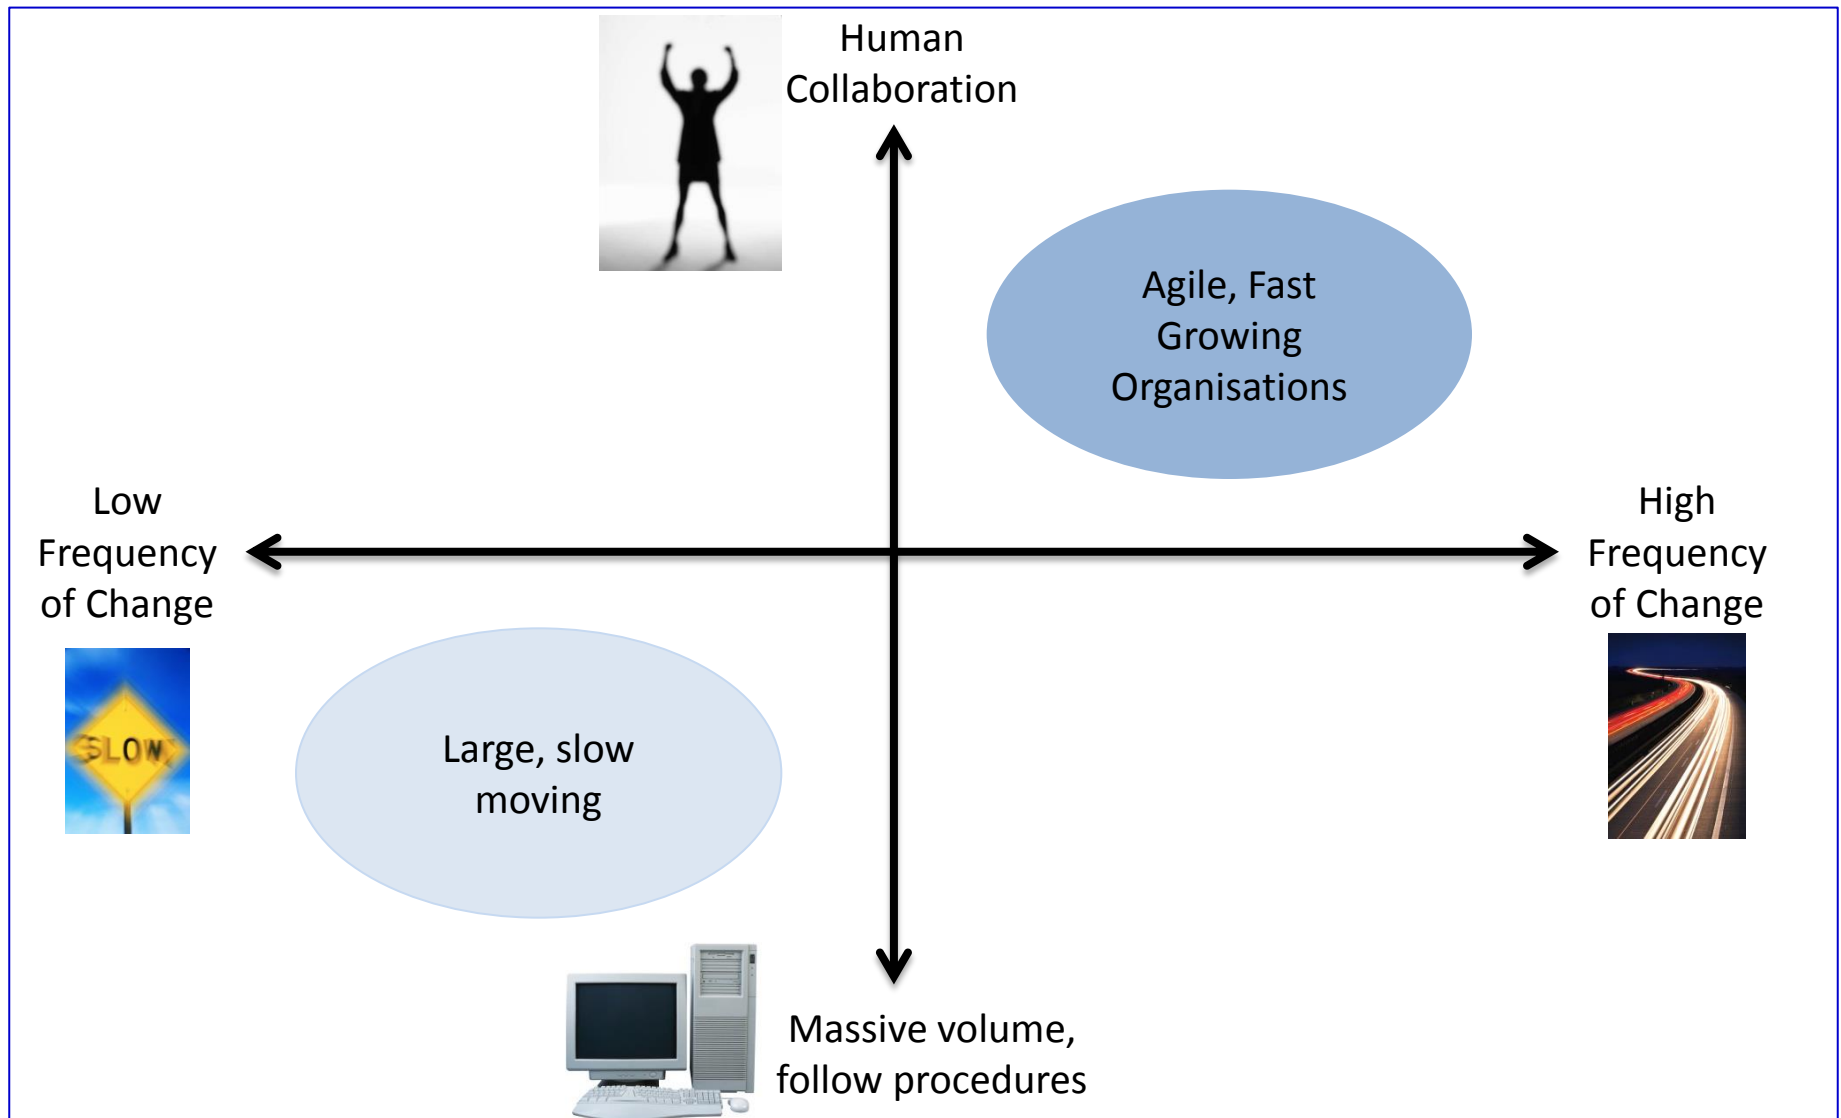

Sequence Kinetics™: Intelligent, Mobile, Dynamic

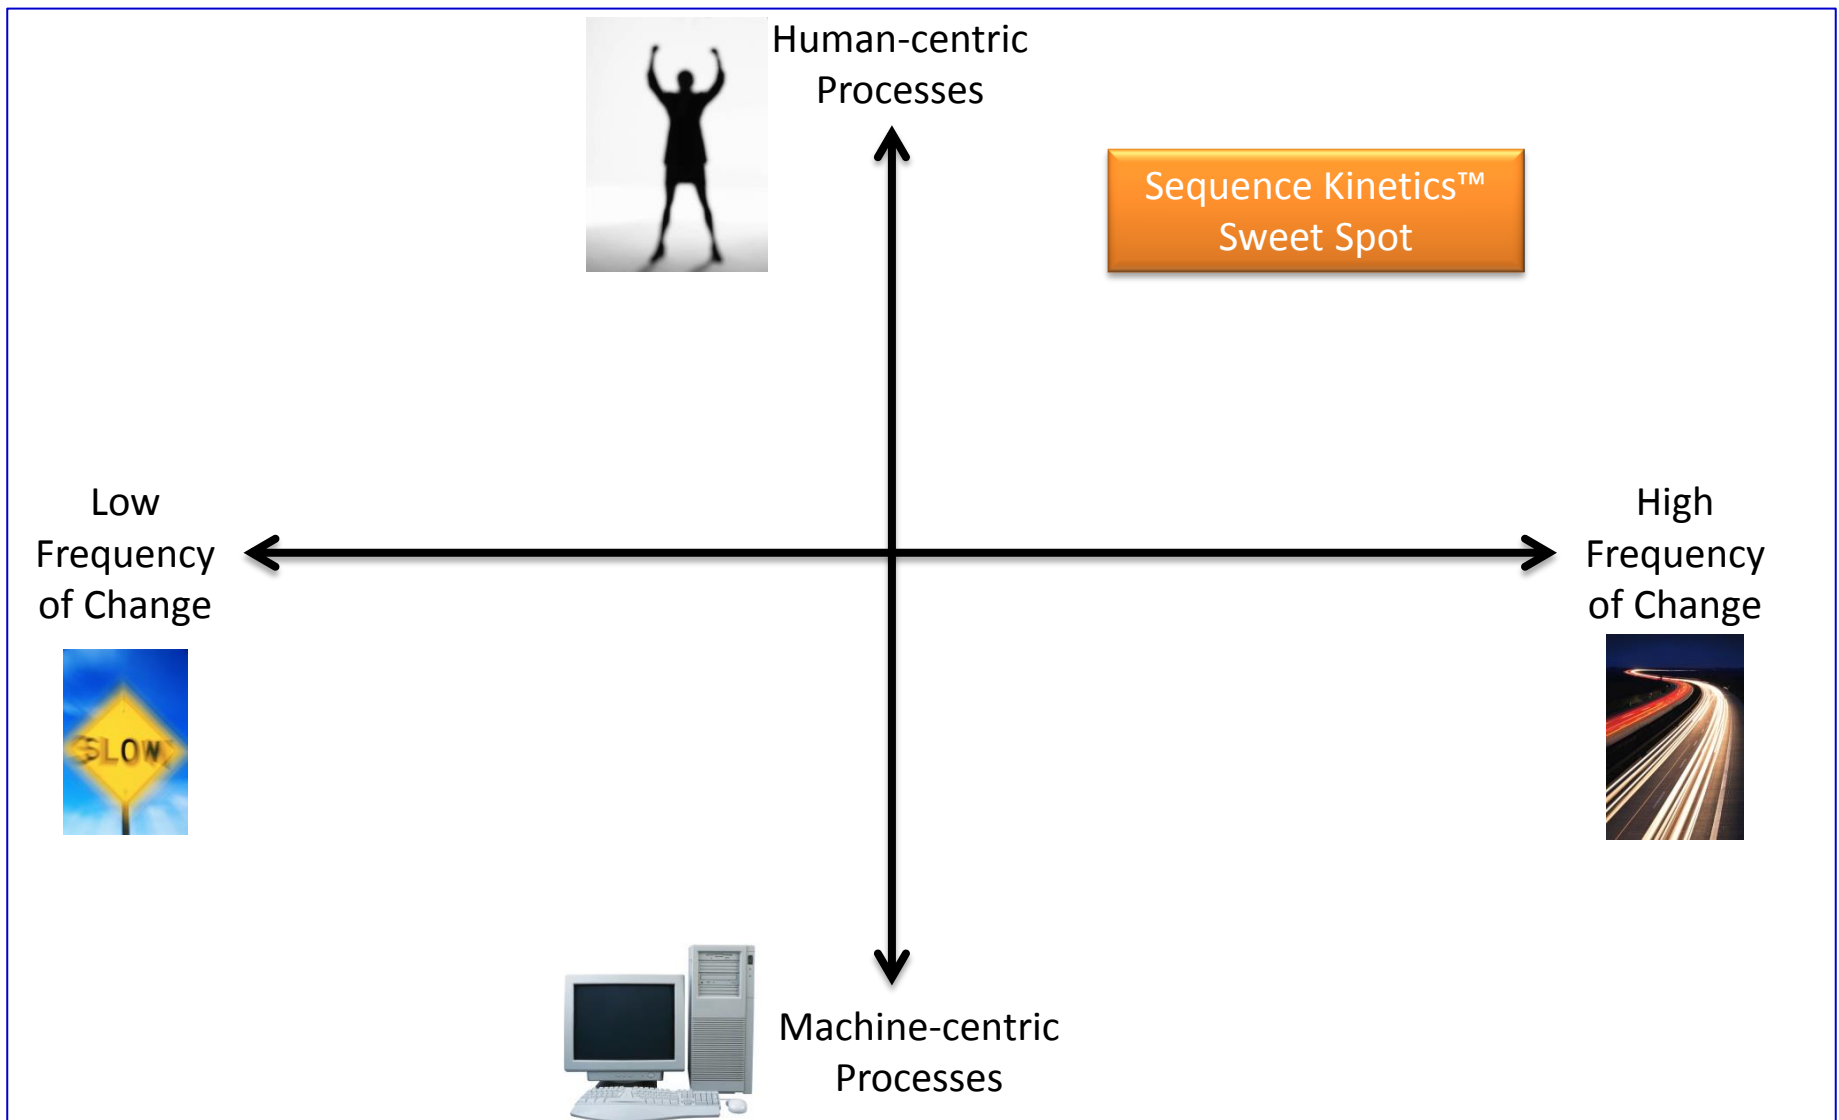

- Intelligent Business Process Management Suite (iBPMS).
- Powered by PNMsoft's unique *HotChange*® technology.
- Rapid build and change of high availability workflows.
- Intensive human collaboration.
- Development lifecycle governance.
- Extends Microsoft platforms like SharePoint, Dynamics and Azure.
- Integrates with popular ERP/CRM products.
- Unparalleled mobile capabilities – write once run everywhere.
- Based on .NET, leverages existing development skills into BPM expertise.
- Answers business need for high frequency of process change AND IT need for a well-controlled process development environment.

For companies competing with big players, Collaboration and Changing are key

Human Centric, High Frequency of Change = Sequence Kinetics™ Sweet Spot

Trend of Required Frequency of Change vs. Trend of Required Level of Control

**Frequency of Business
Processes CHANGE required
to compete**

**Level of Business Processes
CONTROL required for
regulation, compliance and
operations**

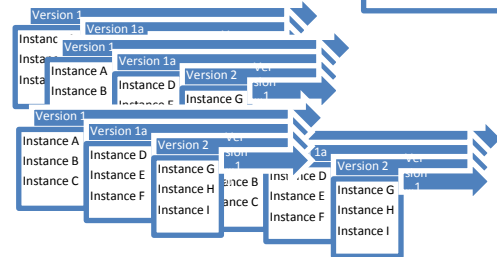

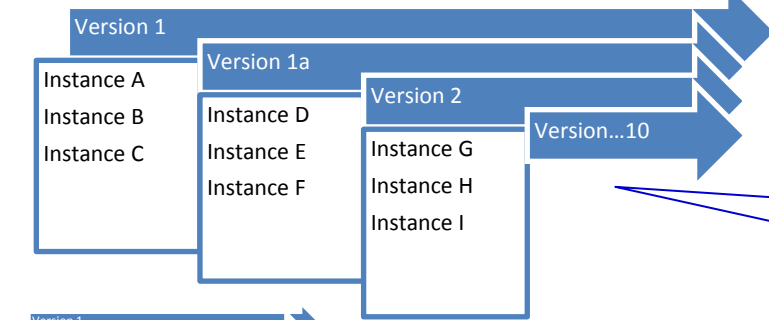

HotChange®: Next generation technology

HotChange® is a technology which permeates all levels of *Sequence Kinetics*™ as a product. *HotChange*® means that organisations who have high frequency of change get the ability to modify, integrate and distribute their business processes in the fastest possible manner, without having to halt these processes as they continue to run in production, while maintaining control and application lifecycle management. *HotChange*® architecture is an inherent aspect of all of *Sequence Kinetics*™ features, modules and platforms.

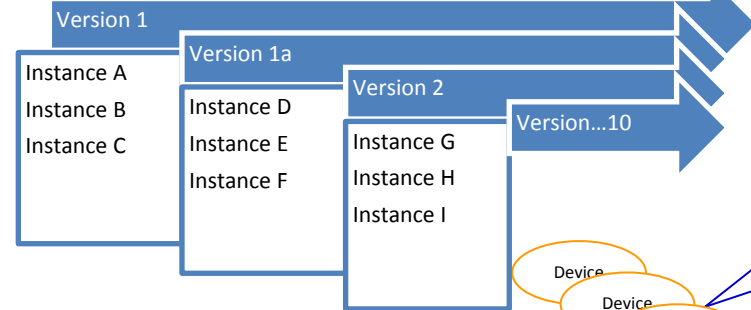

Multi Dimensional Changes = Performance/Management Challenges

Business Process 1

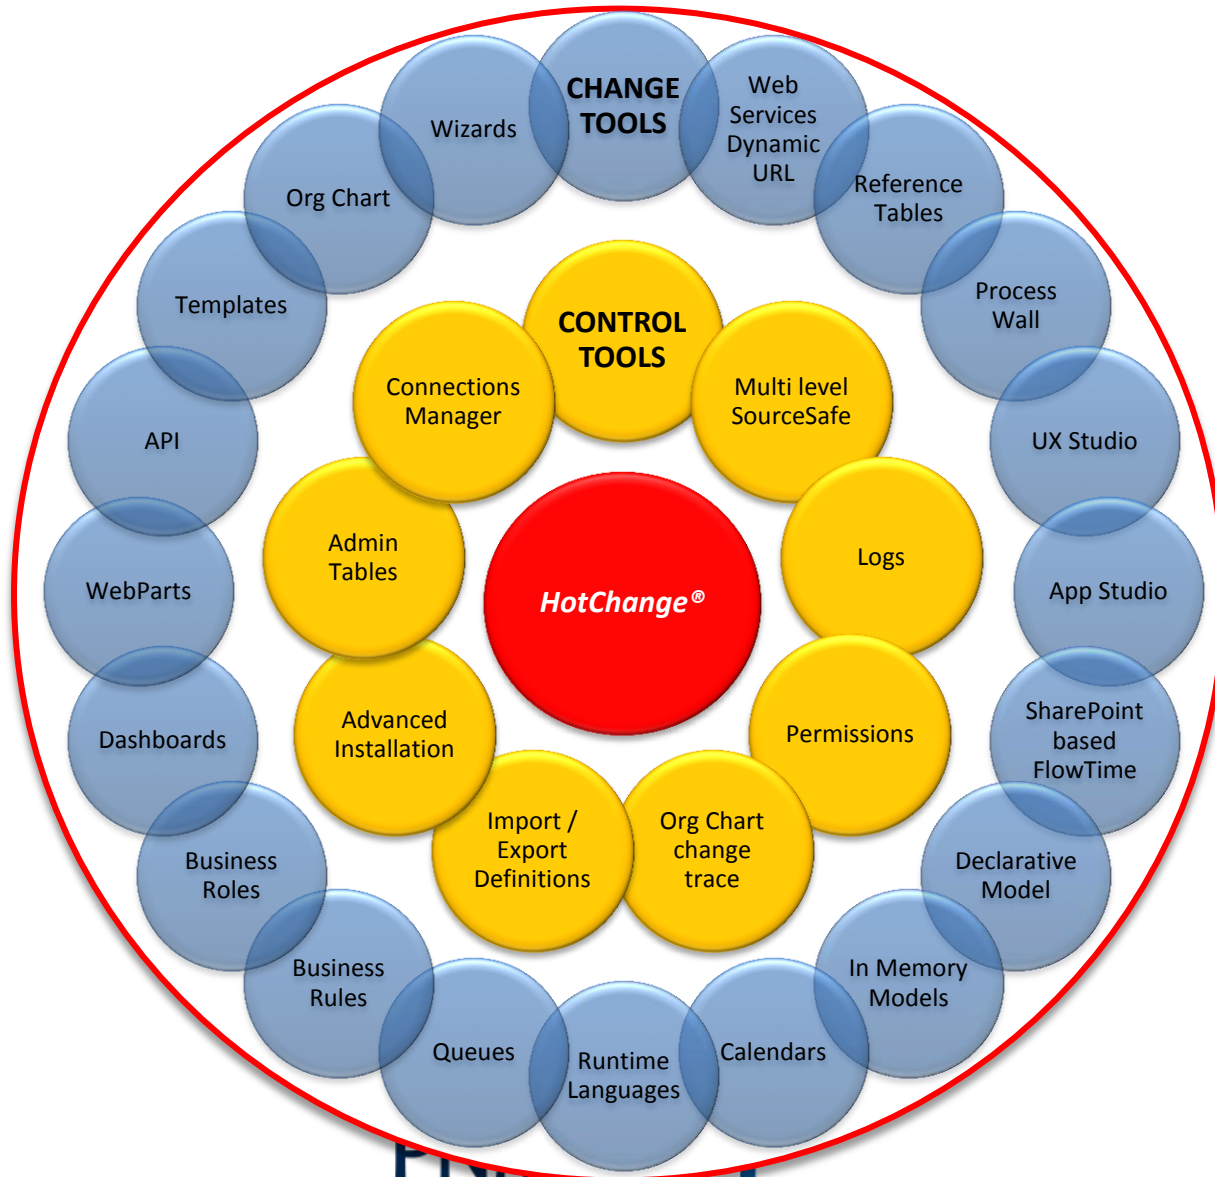

Business Process 100

Number of Active Business Process Applications Required

With HotChange [®] Technology	Without HotChange [®] Technology
1	10
100	$10 * 100 = 1,000$
100	$1,000 * 4 = 4,000$
100	$4,000 * 5 = 20,000$

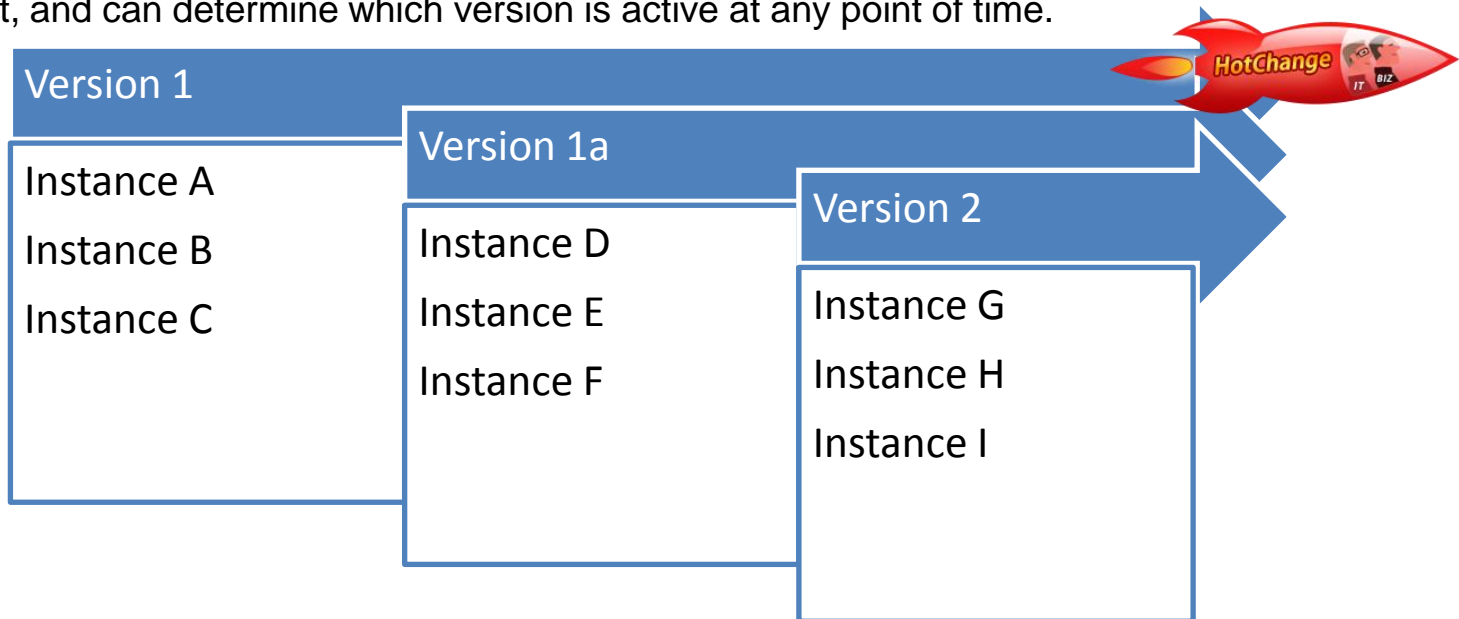

HotChange® Features, Change AND Control

HotChange® Feature Example: Version Control

Sequence Kinetics™ enables superior control over changes to processes and process version management, including:

- Modifications to processes that are in production. These modifications take effect immediately.
- The ability to swap production version with the latest development version of a process. Processes instances that are in production run according to the new version.
- Active version management: developers can manage multiple versions of a process in any given environment, and can determine which version is active at any point of time.

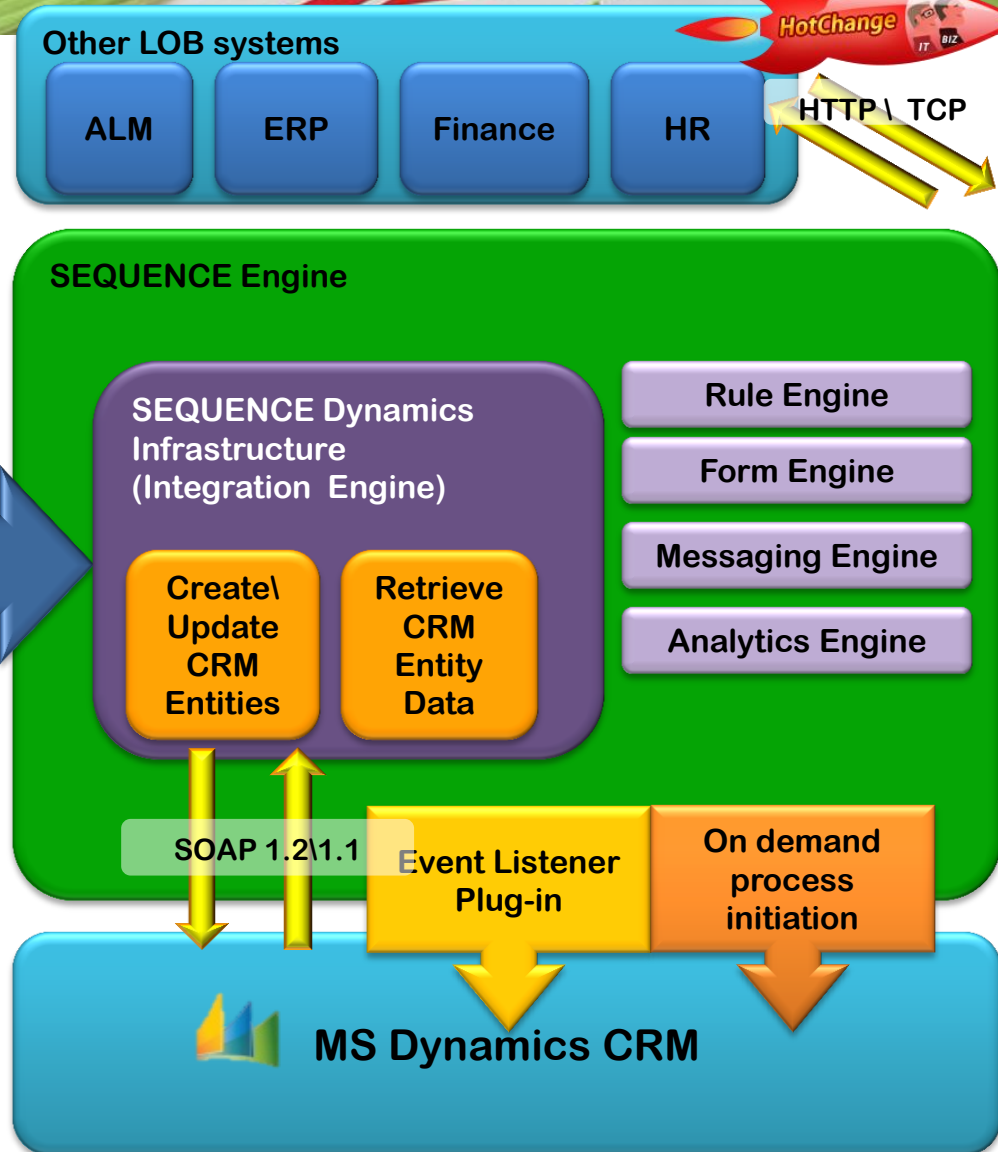

-

HotChange® Feature Example: CRM Integration

- **HotChange®** technology ensures organisations can rapidly extend their CRM with complex processes.
- CRM connectors are wizard-based.

HotChange® Module Example: Process TO GO

Process TO GO Mobile BPM includes:

- ✓ Mobile Portal – A complete BPM suite where users can view their tasks, initiate processes, complete and submit simple forms.
- ✓ 1-Click Action - Enables users to respond to tasks by one click from their mobile devices (and PCs).
- ✓ Mobile MI – Enables manager process reporting via mobile devices.

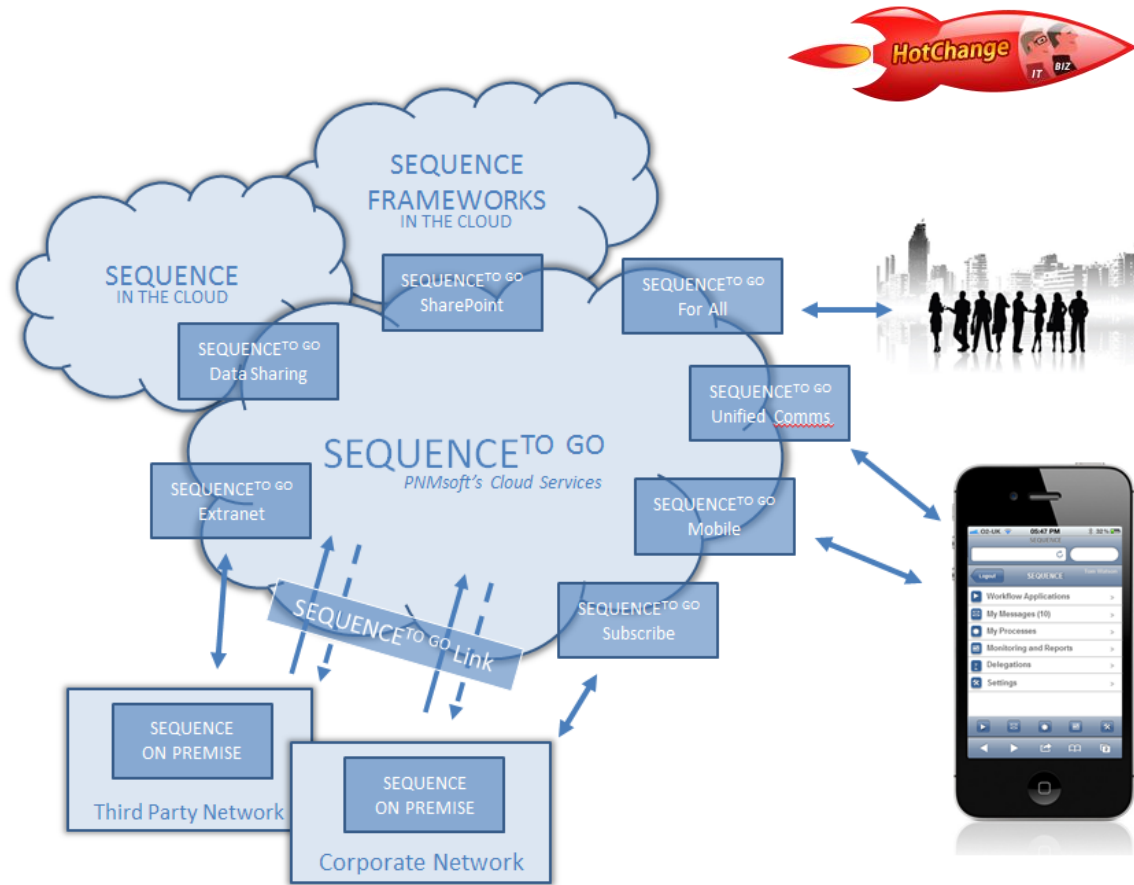

Sequence Kinetics HotChange® technology ensures that the Mobile BPM portal is an natural extension of Sequence Kinetics Flowtime, enabling rapid, flexible work.

HotChange® Architecture: Cloudworks

PNMsoft's Cloudworks enables you to host Sequence Kinetics on Microsoft Azure.

- ✓ **HotChange®** architectures ensures that *Sequence Kinetics™* can be deployed on a variety of platforms, and even rapidly moved from platform to platform.
- ✓ **HotChange®** enables single or multi-tenant deployment.
- ✓ Organisations can choose to host their own private cloud or to have it hosted externally on Azure.

Benefits of *HotChange*®

- Reduce time to implement changes to processes.
- Ability to keep processes running while making changes (no downtime).
- Ability to integrate rapidly with existing and new systems.
- Ability to provide processes interfaces on multiple platforms.
- End-users are not adversely affected by time-to-change.
- Increased ability to continually optimise processes.
- Ability to implement new requirements rapidly.
- Maintain IT governance and control.

Sequence Kinetics iBPMS

PNMsoft's Sequence Kinetics is an intelligent BPMS (Business Process Management Suite) which enables organisations to automate, control and mobilise their end-to-end business processes using unique [HotChange® technology](#). Sequence Kinetics extends Microsoft products and manages processes for businesses and public sector organisations worldwide.
