

Backup365

at-a-glance

Ease of Use

An opportunity to safeguard your customers' critical data, while also adding an additional value add / differentiator to your MSP offering.

- Set and forget
- Automatic backup – every 15 minutes
- Automatically add all users by default
- Daily email alert of changes
- Weekly email summary of service

Security

Backup365 uses best practice security management processes for safeguarding access to system, data on the move, and data at rest.

- Account impersonation credentials encrypted with AES-256 and stored within a restricted access database
- Key managed using Amazon KMS.
- Data stored in encrypted S3 buckets

Recoverability

Backup365 is optimised to provide various options for search and restoration of data.

- Recover data from calendars, emails, contacts and tasks over any period of time
- Restore to inbox folder
- Search, individual mailbox, view and download/export
- Search entire company mailboxes and view/download/export
- Restore to another mailbox

MSP feature-set

Backup365 has been built for Managed Service Providers. With this in mind, Manage Protect has optimised provisioning, reporting and billing functions for MSPs

- Daily alerts of changes & issues
- Weekly summary service reports
- All billing monthly
- ConnectWise integration for billing/assets
