

4.2.18: Increased audit events and Task usability

What's New?

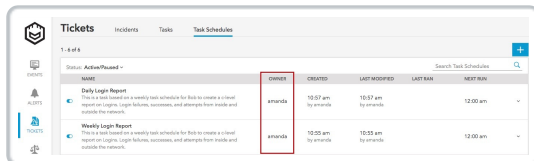

This release includes updates to the DefenseStorm GRID UI for enhanced usability and efficiency. Partial event search results can be downloaded as a CSV, incidents can have watchers, multiple updates to Task and Task Schedules pages, and increased audit events for more detailed event log data.

New Features

- Use checkboxes on Events page to download selected events as CSV
- Add watchers when creating an Incident
- Ticket close audit events now have a duration field to show how long a ticket has been open.
- Audit Events:
 - additional information to category:report
 - to review, enter the following search ``app_name:"DefenseStorm audit" category:"ticket"``

Updated Features

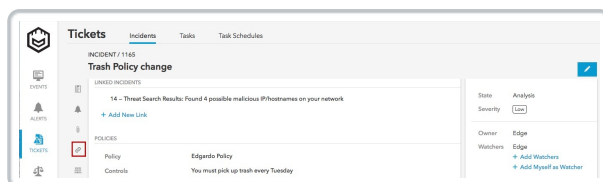

- Added an Owner column to the Task Schedules page

Name	Owner	Created	Last Modified	Last Run	Next Run
Daily Login Report <small>This is a task based on a weekly task schedule for tasks to create a daily report on logins, login failures, successes, and attempts from inside and outside the network.</small>	amanda	10:57 am by amanda	10:57 am by amanda		12:00 am
Weekly Login Report <small>This is a task based on a weekly task schedule for tasks to create a weekly report on logins, login failures, successes, and attempts from inside and outside the network.</small>	amanda	10:55 am by amanda	10:55 am by amanda		12:00 am

Fixed Features

- Linked incidents button sends you to the correct location within the description.

What do you need to do?

No action is required to benefit from these updates.
