

1.17.18: FFIEC CAT, DMV (1.1.5), Windows Agent Parser

Last Modified on 01/17/2018 11:46 am EST

What's New?

Happy New Year! We have started this year out with a bang! This release includes updates to the DefenseStorm Virtual Machine, Windows Agent Parser, and the general availability release of the FFIEC CAT.

New Features

- FFIEC CAT integration

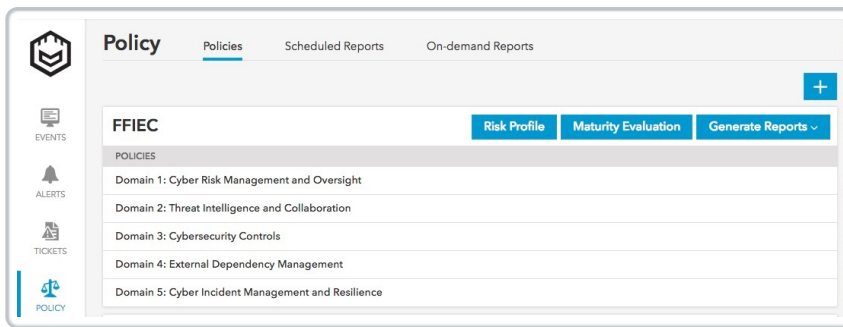

Updated Features

- DVM
- Windows Agent Parser

FFIEC CAT

While the FFIEC CAT guidelines have become an industry standard, that doesn't make it easy to complete, or to understand. We have changed that. Our Policy page now incorporates the entire FFIEC CAT, including overview sections, result charts and explanations, and reporting.

FFIEC reporting offers two different options: FFIEC Report and FFIEC Evidence Report. The *FFIEC Report* provides an executive summary overview, all the charts, graphs relating the Risk Profile and the Maturity Evaluation. The *Evidence Report* is highly customizable and allows you to prove compliance to auditors through the evidence collected for statement in the FFIEC CAT. The evidence for each statement includes: Comments, Tasks, and Task Schedules. For additional information on the integration of the FFIEC CAT, see our Knowledge Center article, [Policy](#).

DefenseStorm Virtual Machine (DVM)

This round of DVM updates resulted in new version number, 1.1.5. This update fixes a problem which resulted in the disk queue system to not start properly after an installation. For the download links, see the [Downloads Page](#) . This page is updated frequently with the most up to date versions of the DVM and Windows Agent.

To check your DVM version number, open your DVM Main Menu, select option 8: Get DVM Status. Compare this version number with the version displayed on the Download Links page.

Windows Agent Parser

We have updated the capabilities to parse events generated by the Windows Agent. The added capabilities did not result in a new version of the Windows Agent. The most recent version is still 1.4.5. The increased parsing of Windows log data allows the data to be more easily monitored, analyzed, and understood.

What do I need to do?

Download the most up to date DVM (1.1.5) by selecting the link from the [Downloads page](#) . The Windows Agent, while it was updated, has the same version number and no action is required.
