## 1. FINANCIAL PLANNING TOOLS

Financial planning tools are a built in feature of CCD and are comprised of Schedules, Analysis, Calculators, Research and Third Party Integrations. All of these tools will use information already entered into the database either at client, holding or Fact find level and will produce client facing reports.

## 2. SCHEDULES

Schedules are found both in the Clients and Fact find modules. No additional information is required, as they are compiled from the information added at holding level.

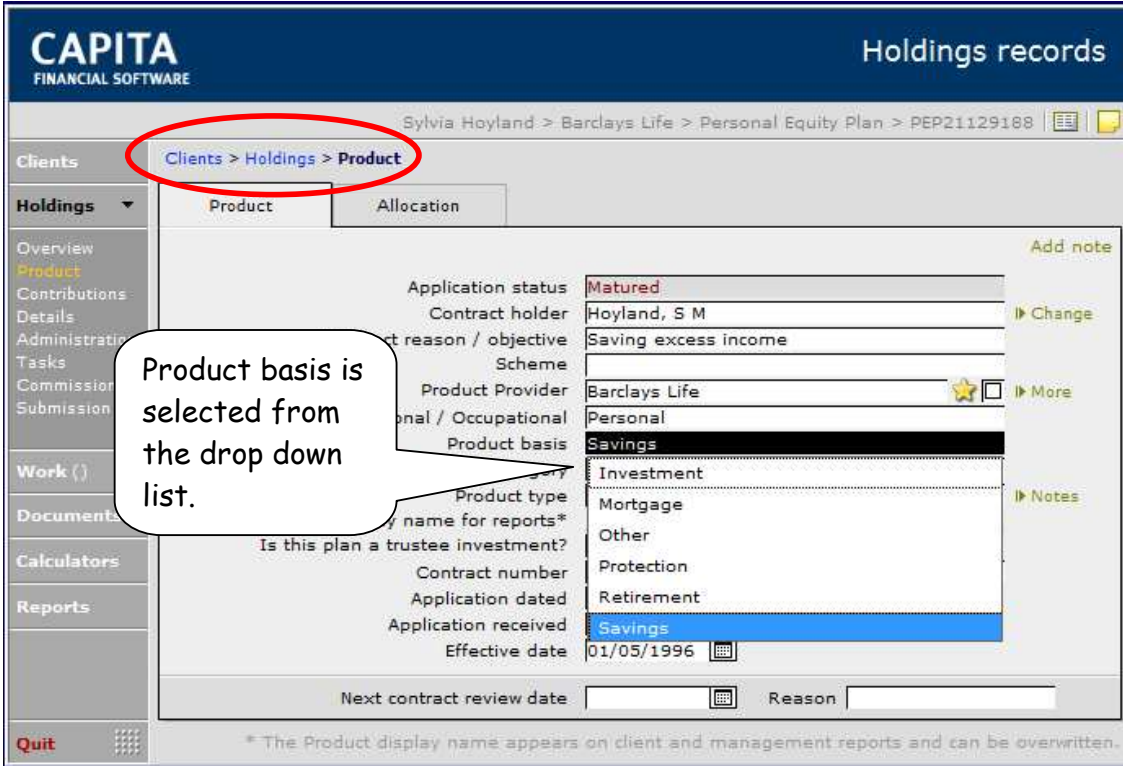

Schedules can be produced either by product basis e.g. investment, retirement, protection etc or from the clients entire position regardless of the product basis.

## 2.1 Product Basis

Protection	Retirement	Investment	Savings	Mortgage	Other
------------	------------	------------	---------	----------	-------

The product basis that a holding will appear in, is determined when the holding is added to the database.

## 2.2. General

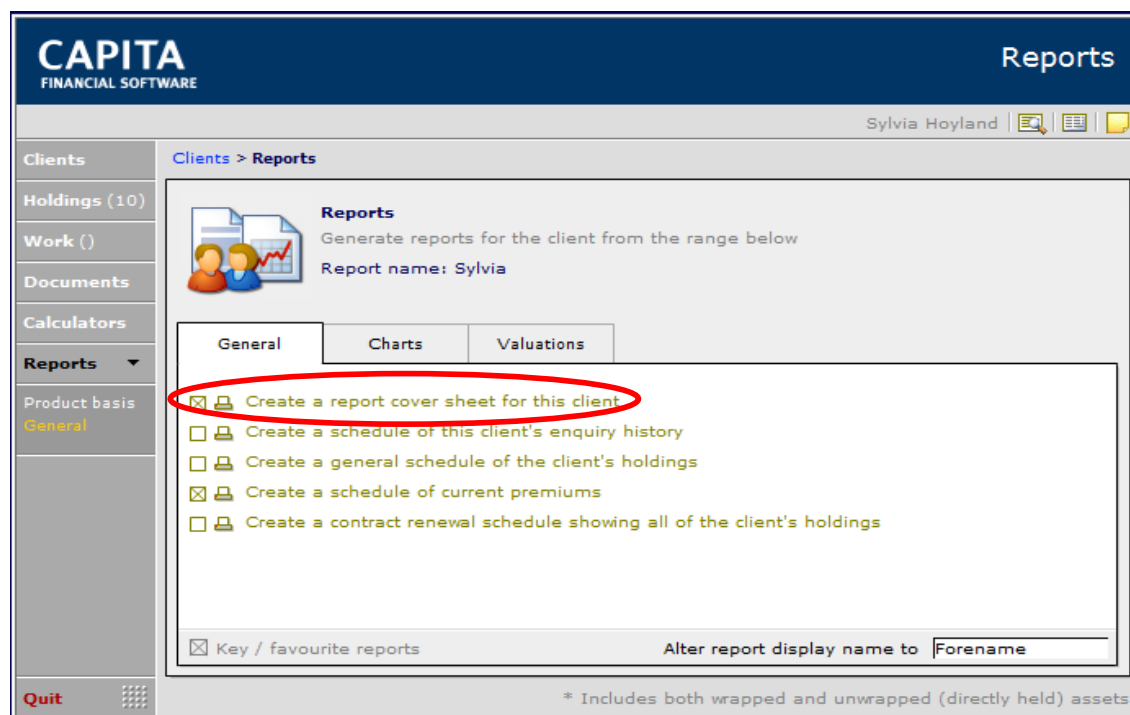

There are 3 tabs in the general reports section. Each tab will compile reports across the whole customer position regardless of the product basis.

### 2.2.1. General

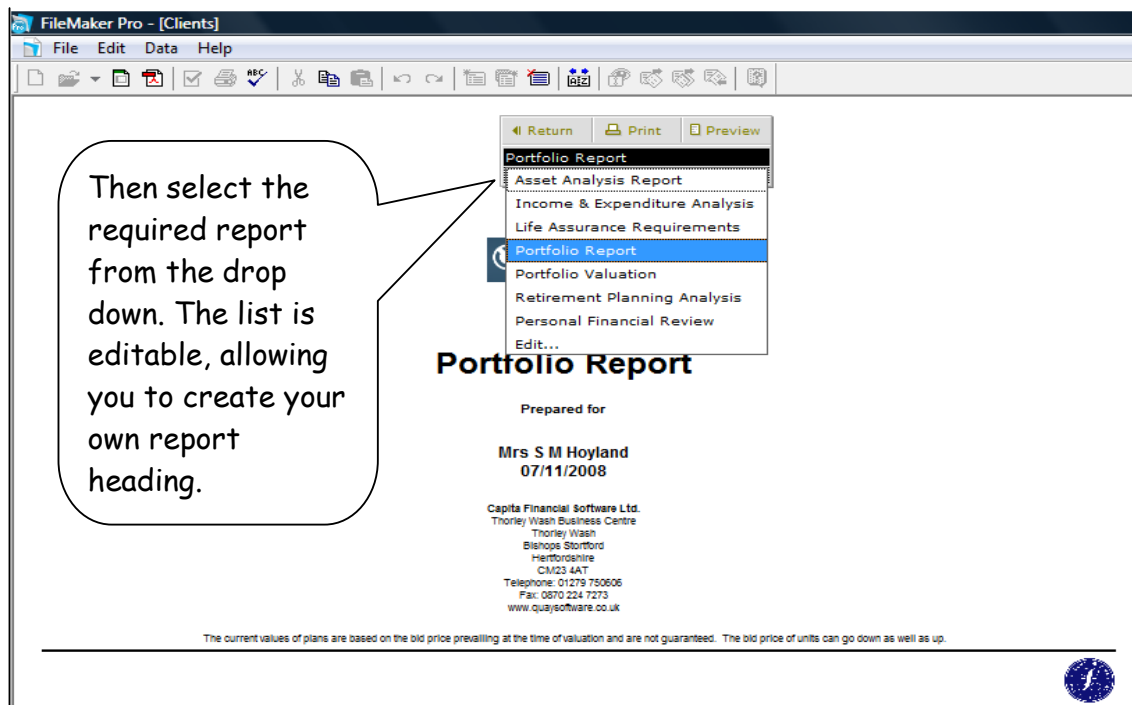

Apart from the first option, all the reports are schedules of the clients enquiries, holdings, premiums or renewal dates.

The first option gives you the ability to create a report header sheet for your client. All reports in this and the product basis area do not have header sheets.

Creating a report header sheet will enable you to present a selection of reports in a professional manner.

When selecting the report cover sheet, you will firstly be asked to select the page orientation you require.

2.2.2. Charts

The chart will include the client entire position and not just by product basis.

## 2.2.3. Valuations

The valuations will show the clients entire position and not just by product basis.

Valuation

	Asset / Fund name		Sector			Holding (No. of units)	Units valid at (date)	Unit price	Price valid at (date)	Current value
	Threadneedle Equity & Bond 1		Cautious Managed			402.00	06/09/06	84.14	09/08/07	£338
Report total										£551,269

Unlisted holdings - please note that the price of units and any income from them can go down as well as up and therefore the value of an investment can fluctuate and is not guaranteed. Where a fund or trust invests overseas, changes in the rate of exchange may have an adverse effect in the value of the investment/income from the investment in sterling terms.

You can select your favourite report from within any of the tabs. This will save time when identifying the reports that your company prefer to use.

## Life Assurance Analysis

 Close  Return  Next  Print

### What is life assurance?

Life Assurance is a policy provided by a Life Assurance company, that pays out either a lump sum or a series of payments if or when you die. These payments are normally paid without the deduction of any tax, and in most instances are actually tax-free.

The proceeds of a Life Assurance policy can be used to; pay off a debt such as a mortgage; to provide an income for your dependants; as a savings plan.

You pay monthly premiums or an annual sum to the Life Assurance company for either a given time span or in the case of Whole of Life Assurance normally through to until death (some Whole of Life policies have a maximum age limit on premiums).

Life Assurance policies can be combined with other forms of insurance, such as Critical Illness insurance so that you receive the lump sum if you are diagnosed with a serious illness.

### What types of Life Assurance are there?

There are three main types of life insurance:

**Term Assurance:** this is the most common form of insurance. It pays out a lump sum if you die at any time throughout the term of the policy.

**Family Income Assurance:** this scheme provides an income for your dependants rather than paying them a lump sum, were you to die during the term of the policy. Please note that the income is only paid for the remaining period of the policy term. Therefore you will need to make additional arrangements to provide an ongoing income after the policy expires.

**Whole-of-Life Assurance:** this type of policy is designed to pay out at the time you die whenever that should be. As long as you maintain the policy there is a guarantee that, on your eventual death, the sum assured (level of Life Assurance cover) will be paid to your Estate.

Some policies require premiums to be paid right up until the point of death while others have a maximum period for which premiums are payable. Where this is the case premiums are normally payable up to age 80 or perhaps age 85.

**Endowment Assurance:** this type of policy plays two distinct roles. It not only provides Life Assurance protection should you die during the term of the policy, which is normally longer than 10 years, but should you survive to the end of the policy term the policy will pay out a lump sum. This lump sum is known as the maturity value.

As there is an investment element within Endowments, normally this provides for similar levels of Life Assurance protection than an equivalent Term Assurance or Whole of Life policy.

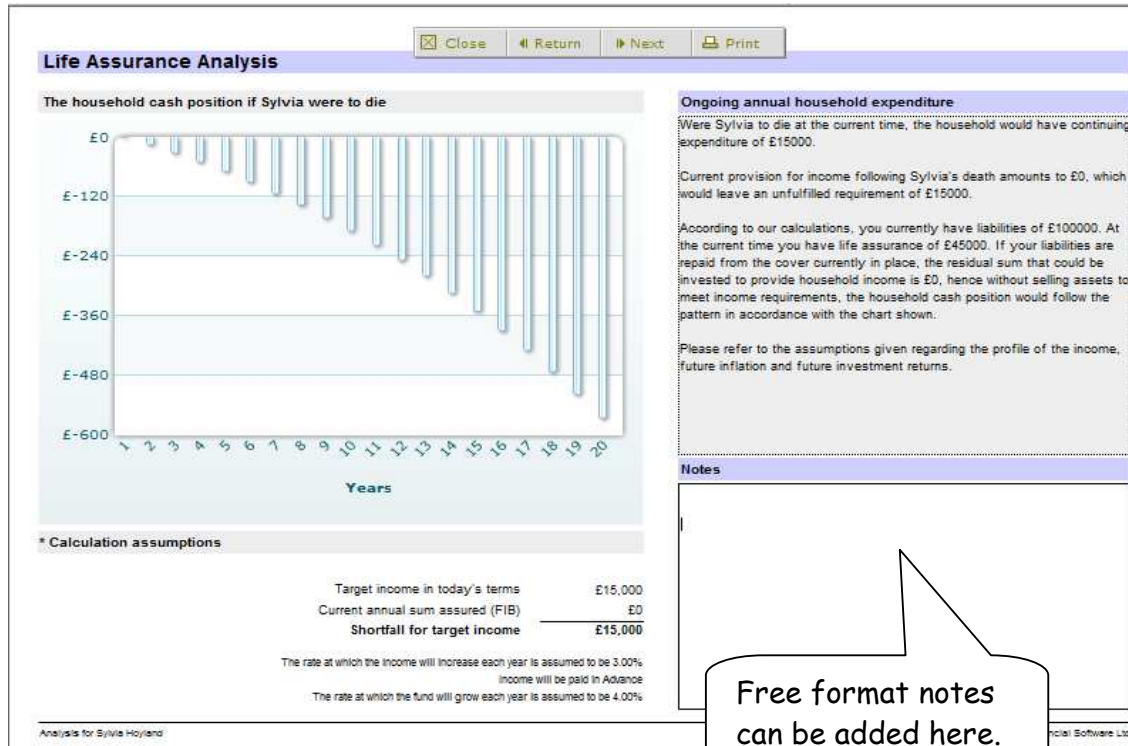

The premiums for Life Assurance policies impact on the level of premium required.

Text can be modified here. Any changes will be for this report only and will revert to the pre set text on any subsequent reports.

Capita Financial Software Ltd.

### 3.8. Foreign Exchange Calculator

This is just a quick calculator and no printed report is produced. Exchange rates can be manually added here or will be pulled through from the currency table in the Setup module.

NB:- Always check that you are using an up to date exchange rate, as the table in the Setup module is not automatically updated.

The screenshot shows the Capita Financial Software interface. The top header includes the Capita logo and 'Client records'. A sidebar on the left contains navigation links: Clients, Holdings (10), Work (), Documents, Calculators (highlighted), Protection, Savings, Pensions, Taxation, School fees, Reports, and Quit. The main content area is titled 'Currency converter' and asks 'How much is the currency worth in £ Sterling?'. It features a text input field for 'Convert (value)' with '20,000.00' entered, a dropdown menu for 'CAD' (Canadian Dollar), and a display showing the '£ Sterling equivalent' as '8,211.87' and the 'Exchange rate' as '2.4355'. At the bottom of the calculator window, it shows 'Date current: 13/07/04' and a link to 'Review / update currency rates'.

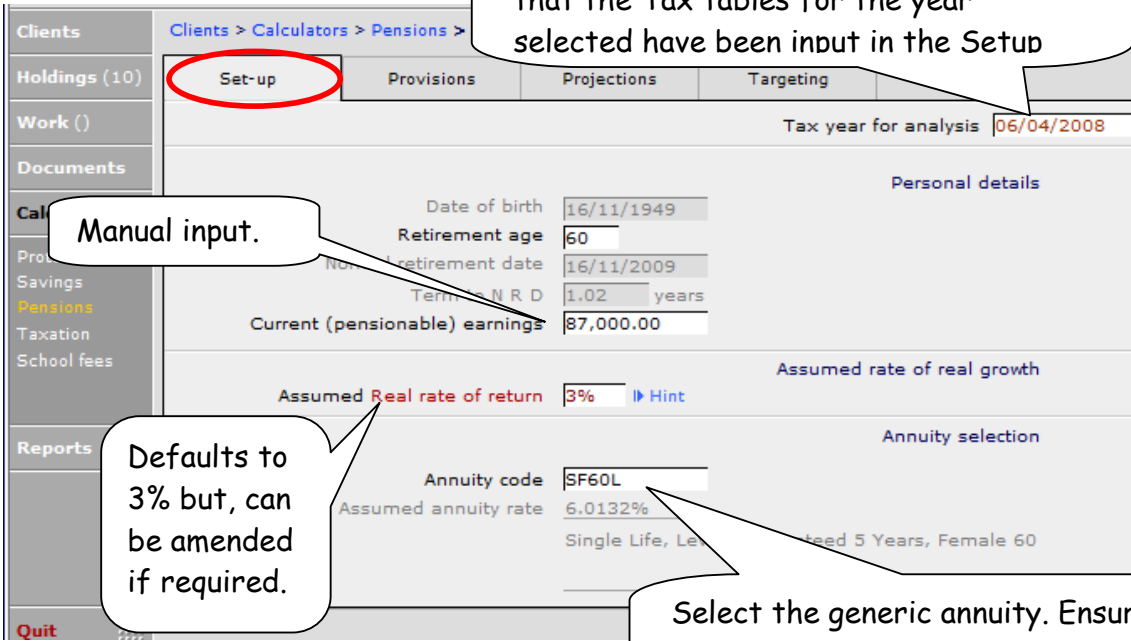

### 3.9. Personal Pension Calculator

Select the tax year for analysis, ensure that the Tax tables for the year selected have been input in the Setup

Manual input.

Defaults to 3% but, can be amended if required.

Select the generic annuity. Ensure the rates have been updated in the tables section of the Setup module.

Personal details

Assumed rate of real growth

Annuity selection

Complete the list from the client's holdings records ►

NB:- Only the personal pension details can be pulled through from the Holdings records. Occupational schemes need to be manually input, even if the details have been entered into the holdings record.

Complete the list from the client's holdings records ▸

### Retirement benefit analysis

**Introduction**

Our analysis is based on a retirement age of 60. As at the report date, the term to retirement age is 1.02 years.

Your current salary for pension planning purposes is understood to be £87000 per annum.

The following analysis is based on a real rate of return. We have omitted inflation from the calculations for reasons of simplicity as we believe that it is more understandable to base retirement income in today's terms. To illustrate this, if your current salary were to be inflated at the rate of, say, 5% per annum, then your earnings at retirement would be £90636. An annual pension equivalent to 50% of your earnings would be £45268.

The real rate of return (the rate of investment growth above the rate of inflation) is assumed to be 2% per annum.

Estimated entitlement to State pension benefits have been included in the analysis in summary.

Based on a current salary of £87000 and your need to provide a pension equivalent to 50% of your earnings, your target pension requirement is therefore £43500 per annum.

Text can be amended here, any amendments will only be applicable for this clients report.

Sylvia's current position

Current value of (money purchase) pension fund	£184,216
Estimated value of Money Purchase fund	£187,959
Estimated Value of expected (future) contributions	£2,891
Total estimated money purchase fund	£190,850
Estimated Annuity (based on total money purchase funds)	£11,476
Pension income from occupational schemes	£0
State pension income in today's terms	£5,200
Total estimated income	£16,676
% Funded	19.17%

How your current pension position is constructed

Required contribution analysis

According to our records, your current total regular pension commitment is: £235

Frequency Paid: M

In accordance with the current position summary, you are on target for: 19.17%

This figure assumes real rate of investment return of: 2.00%

Your estimated salary at retirement (excluding inflation) is: £87,000

Your required retirement pension is: £43,500

According to our calculations, your current retirement pension provision is: £16,676

Hence there is a shortfall in your projected annual pension income of: £26,824

To meet your target, your monthly contribution needs to increase by: £36,257

Important note:  
The increase in monthly contributions has been calculated using set assumptions for future inflation, investment growth and growth in your earnings. It is, therefore, vital that this calculation is regarded as an estimated figure only. All financial plans must be regularly reviewed to ensure that they meet your expectations.

## School Fees Analysis

### Overview

It is not possible to say that one type of plan is suitable to cover school fees because there are so many considerations. The type of school chosen affects the cost as does the age at which parents would like their child to start education and also the duration. It is also important that parents allow for the cost of the extras on top of basic fees. The total cost and timing of fee payments together with inflation on school fees (school fees have tended to outstrip general inflation) will have a major impact.

There are three basic alternatives to provide for fees, a capital sum, payments out of income and borrowing. There are two main factors that influence most cases, the source of the cash to fund the plan and the length of time before the fees become due. What might be an appropriate investment over the longer term might be wholly inappropriate over the short term.

Investors may have to make sacrifices in terms of investment performance in order to obtain the flexibility needed. A scheme under which an investor would be severely penalised for early termination would be unsuitable if fees were to become payable before the normal maturity date.

There is no reason to stick to a single route. By using two or more investment vehicles a balance can be made between safe and more speculative investments thereby protecting against future uncertainties. In the short term, possible falls in share prices may deter equity based investments, but history shows that over a longer period equities outperform fixed interest investments. Therefore the choice between equity based and fixed interest investments should be guided by the period of time before fees become payable. However, even if this period is very long, some safe fixed interest investment should still be included in the portfolio. Past performance is no guarantee of future returns.

We remind all investors that the values of units in unit-based investments can go down as well as up, and on encashment they may not necessarily get back as much as they invested.

Before developing an investment strategy, approximate costs of the proposed investment need to be identified and the analysis on the following pages presents our calculation of the necessary investment both in terms of the amount of capital that would need to be invested and, by contrast, the regular savings commitment.

## Costs & Options

### The analysis is based on the fees shown below

School A, Infants, at which termly fees are £750  
School B, Primary, at which termly fees are £1250  
School C, Junior, at which termly fees are £2000  
School D, Secondary, at which termly fees are £3000  
School E, 6th form college, at which termly fees are £3500  
University, University, at which termly fees are £2500

Year	Comm.	Term (yrs)	School	Projected Fee
Year 1	Sep 2013	4.81	A	£2,737
Year 2	Sep 2014	5.81	A	£2,847
Year 3	Sep 2015	6.81	B	£4,935
Year 4	Sep 2016	7.81	B	£5,132
Year 5	Sep 2017	8.81	C	£8,540
Year 6	Sep 2018	9.81	C	£8,881
Year 7	Sep 2019	10.81	C	£9,237
Year 8	Sep 2020	11.81	D	£14,409
Year 9	Sep 2021	12.81	D	£14,986
Year 10	Sep 2022	13.81	D	£15,585
Year 11	Sep 2023	14.81	D	£16,208
Year 12	Sep 2024	15.81	D	£16,857
Year 13	Sep 2025	16.81	E	£20,453
Year 14	Sep 2026	17.81	E	£21,271
Year 15	Sep 2027	18.81	University	£15,801
Year 16	Sep 2028	19.81	University	£16,433
Year 17	Sep 2029	20.81	University	£17,091
Year 18	Sep 2030	21.81		
Year 19	Sep 2031	22.81		
Year 20	Sep 2032	23.81		

Please note that the Projected fee shown above is the fee for the school year, based on three terms at the fee adjusted for inflation

### Analysis of school fees for Daniel

The analysis has been prepared based on the schooling of Daniel whose date of birth is 10/11/2008.

For the purposes of the analysis, we have assumed that the school fees indicated increase at the rate of 4% per annum compound. Correspondingly, we have assumed that the investment return achieved net of all contract charges would be 5% per annum.

### Introduction

Taking out a mortgage is one of the biggest financial commitments you can make, both in terms of the amount you borrow and the length of time it may take to repay it.

This report is the first stage in providing you with mortgage advice which is tailored to your specific circumstances and objectives. The purpose of the report is to review your current position in relation to your objectives and set out areas which need further attention together with possible solutions.

The analysis and comments provided in this report are based on information provided by you during our recent discussions and contained in your Confidential Financial Review Form. You should check carefully that the information shown is correct and advise us of any revisions that need to be made, either because of errors, misunderstandings or recent changes to circumstances.

There are a number of key assumptions which have a considerable impact on the plan, such as your income, future rates of mortgage interest and the rate of growth in the value of your property. Each financial planning assumption used is stated within the report and you should satisfy yourself that the assumptions are correct and acceptable to you as they may affect your future ability to afford your mortgage, particularly if your income falls or interest rates rise.

Although interest rates have been stable over the past few years, this could change. In the past, interest rates have risen from 7.5% to 15% in just a few years. Interest rate rises could increase your monthly payments considerably, making it difficult for you to afford them.

**Requirements and key planning assumptions:**

The property to be mortgaged	Financial criteria	Intended transaction
19 Goddard Avenue	Purchase price of property	Remortgage
Watford	Valuation of property £200,000	Remortgage
WT3 8NK	Mortgage amount required £150,000	
	The initial value of your equity £50,000	
	The term of the borrowing 20 years	
	Mortgage interest rate 6.5%	

The assumptions about the tax position of the plans and any recommendations made in the report are based on our understanding of current law and Inland Revenue practice which may be subject to alteration in the future. In particular, what assets, gains or income are taxed and the levels of taxation on them are all subject to change. Tax reliefs may also change and their value to you will depend on your individual circumstances.

### Your Borrowing Requirement

**Your borrowing requirement**

You can typically borrow up to three and-a-half times the main earner's income before tax, plus one times any second earner's income, or alternatively two-and-a-half times joint incomes (if this is larger).

The lender may only count half of income such as overtime, commission or bonuses unless this is guaranteed. Lenders will reduce the amount they will lend if you have substantial outgoings such as other loan payments.

Lenders will also lend only up to a maximum percentage of the property value (the Loan to value ratio).

Purchase price of property	
Valuation of property	£200,000
Mortgage loan amount required	£150,000
The initial value of your equity	£50,000
The term of your contract	20 years

**Loan to value ratio, Year 1**

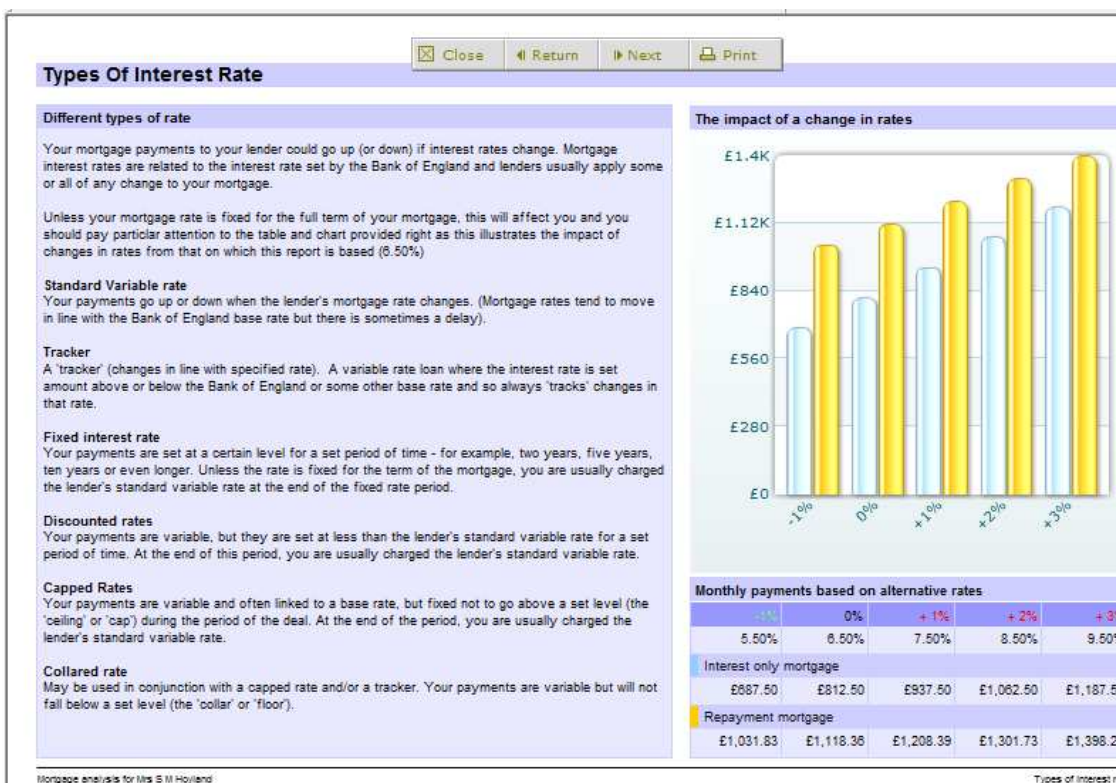

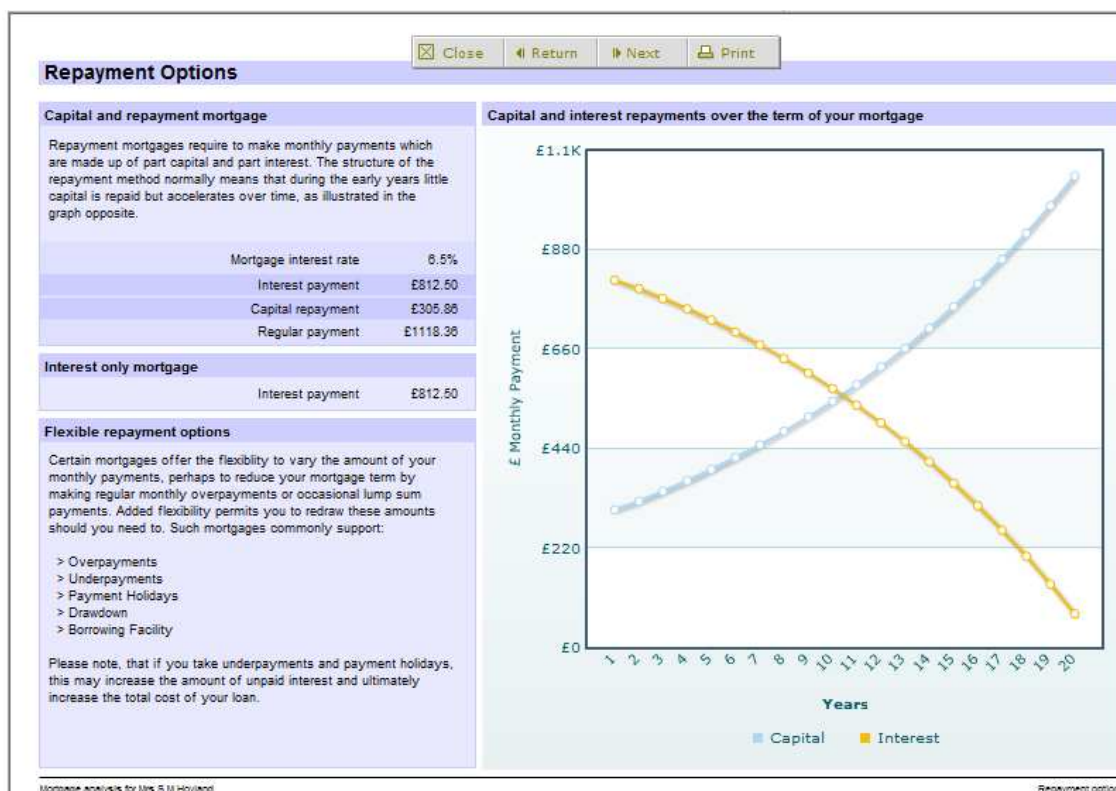

**Year 10 (Repayment)**

**Projected equity assuming that you repay interest only**  
assuming annual property growth of 5.00%

**Projected equity assuming that you repay both capital and interest**  
assuming annual property growth of 5.00%

### Your Personal Requirements And Preferences

Requirements / priorities	Priority	Comments
An upper limit on your mortgage costs for a specified period	High importance	
To fix your mortgage costs for a certain period	High importance	
How long would you want mortgage costs to be fixed for?	Low importance	
Access to an initial cash sum (known as a Cash back)		
If important, how much?		
A discount on your mortgage repayments in the early years		
If important how long would you want the discount to last?		
No early redemption charge on full or part repayment		
No tie-in after a fixed, discounted or capped interest period		
No higher lending charge		
Speed of mortgage completion		
Ability to add fees to the loan		
The lender's policy on further lending in the future		
Ability to link your mortgage to your savings / current account		
Meets the Governments CAT standards,		
Free legal fees		
Valuation refunded		
No booking or arrangement fees		
Ability to vary the repayment amount / take repayment holidays		

If the Planning section of the Fact find has been completed in full, then the priorities and comments will be pre-populated.

If they have not been completed, you have the option of completing them here.

## Inheritance Tax Analysis

Prepared For Mr & Mrs M K Pound

Close Return Next Print

## Introduction

The amount of IHT paid on inheritances in the UK has almost doubled in the last 10 years from £1.211 billion in 1991/92 to £2.9 billion in 2004/05 (source Inland Revenue Pre-Budget Statement 2004). This has mainly been fuelled by the rise in house prices and the disproportionate increase in IHT reliefs.

Currently the starting point – called the “nil rate band”, is just £300,000 (2007/08). This includes all assets and not just your home. It also includes the value of any gifts made within seven years of the donor's death which are known as “potentially exempt transfers”. Some gifts may be subject to IHT if made to a discretionary trust.

The tax burden not only reduces the value of any inheritance but has to be paid before probate can be granted (which is when the Will is officially recognised). The IHT is due within six months of the end of the month in which death occurred. This often requires the immediate sale of assets or for beneficiaries to find the money to pay the tax.

With some preparation and careful planning it is possible to reduce your liability or to avoid the tax altogether. There are a number of reliefs and exemptions from IHT which mean that it is sometimes called a “voluntary tax”.

### Current Liability

Before proceeding any further we should calculate the extent of your current liability. My calculations are based on the details you have provided to me of your assets and the main provision of your Wills.

### Mitigating IHT Liabilities

There are many ways in which the IHT liability can be reduced and even mitigated in some cases.

For example:

- > Life Assurance policies could be placed into a simple trust to keep the proceeds out of your estate
- > Pension scheme death benefits to be paid to a trust rather than the surviving spouse.
- > Effective Wills. A current Will is essential and can include IHT saving methods.
- > Making use of Exemptions such as those which allow you to make gifts each year which do not attract IHT.

These are just some of the more popular methods. This issue needs to be addressed in order to preserve the value of your estate as far as possible for your intended beneficiaries.

 Print

Gifts are exempt from Inheritance Tax at the time that you make them but there are circumstances in which Inheritance Tax has to be paid by the person you gave the gift to if you die within seven years. Hence gifts are only potentially exempt from Inheritance Tax. Such gifts are called Potentially Exempt Transfers (PETs).

Where you make a PET and die within seven years, 'taper relief' may reduce the amount of tax payable. This is a sliding scale, which reduces the tax the more of the seven years that you live as follows:

Period between gift and death	Percentage of the full charge which applies
Three to four years	80.00%
Four to five years	60.00%
Five to six years	40.00%
Six to seven years	20.00%

### Gifts Made By Mark

Date of PET	Value	Term *	Taper rate	Unused NRB	Taxable	Tapered

## Introduction

Close Return Next Print

Our aim is to work closely with you over the years to help you achieve your financial objectives. Through our research we aim to construct a financial programme that incorporates suitable products that are available today.

In addition, as Independent Financial Advisers, we are not beholden to any of the insurance companies, fund managers or other product providers whose services we may recommend. These are always selected on the basis of best value to our clients.

Planning your life assurance, investment and pensions program is the only way of ensuring that you will achieve your financial objectives. We have identified the main areas of concern as well as offered suggestions as to how these concerns can be handled effectively. These have been prioritised by you at our initial meeting and are detailed overleaf.

From the confidential fact find we are able to construct an understanding of your income and expenditure and your current asset and liability position. These items are detailed on the "net worth" page within the report.

### Wealth warning

This report is designed to be a discussion document and although we may well make certain recommendations, these may be varied later in the light of your more precise requirements. Although we make every effort to ensure the accuracy of the information conveyed within this report, we cannot be held responsible for changes in legislation or changes in the third party contracts.

Text can be amended here, any amendments will only be applicable for this clients report.

## Personal Details

Life Assurance

Life assurance is designed to pay the beneficiaries a lump sum upon the death of the life assured (or the 1st or 2nd death of joint lives assured) within a given term or for Whole of life plans whenever you die.

Life assurance is used for many purposes, the most common being to cover outstanding liabilities (such as a mortgage) or to provide financial help for a bereaved family.

Life assurance is designed to help the family recover financially from the death of either one of the bread winners. It should be there to help with the repayment of debt and to replace the income of the deceased partner.

Critical Illness

Providing security for your family if you suffer a critical illness

Critical illness cover is designed to pay a tax free capital sum if the policyholder is diagnosed with a critical illness such as:

Malignant and invasive cancer  
Heart attack  
Stroke  
Kidney failure  
Coronary artery by-pass surgery  
Major organ transplant  
Multiple sclerosis  
Permanent total disability

This list represents a small sample of the many conditions now covered under a modern critical illness policy.

## Introduction

This report is the first stage in providing you with a comprehensive financial plan which is tailored to your specific circumstances and objectives. The purpose of the report is to review your current position in relation to your objectives and set out areas which need further attention together with possible generic solutions.

The report may not include specific product or investment recommendations for some of your objectives. In such cases these will be provided in any subsequent reports. Figures given for the costs of any form of life assurance are based on the assumption that any application would be accepted on normal terms.

The analysis and comments provided in this report are based on information provided by you during our recent discussions and contained in your confidential Personal Financial Questionnaire. You should check carefully that the information shown is correct and advise us of any revisions that need to be made, either because of errors, misunderstandings or recent changes to circumstances.

There are a number of key assumptions which have a considerable impact on the plan, such as inflation, the rate of growth of investments etc. Please refer to Appendix A for details of the financial planning assumptions chosen.

The assumptions about the tax position of the plans and any recommendations made in the report are based on our understanding of current law and Inland Revenue practice which may be subject to alteration in the future. In particular, what assets, gains or income are taxed and the levels of taxation on them are all subject to change. Tax reliefs may also change and their value to you will depend on your individual circumstances.

The longer you live and the earlier you retire, the longer you will be drawing on the capital that you have accumulated. For the purposes of this plan we have assumed you both survive until Mark is aged 80.

We have assumed that Mark retires at 65 and Clare retires at 62.

As with all aspects of the plan, the assumptions should be reviewed from time to time if it becomes appropriate to do so.

This section provides a summary of your assets and liabilities with further details provided in Appendix B.

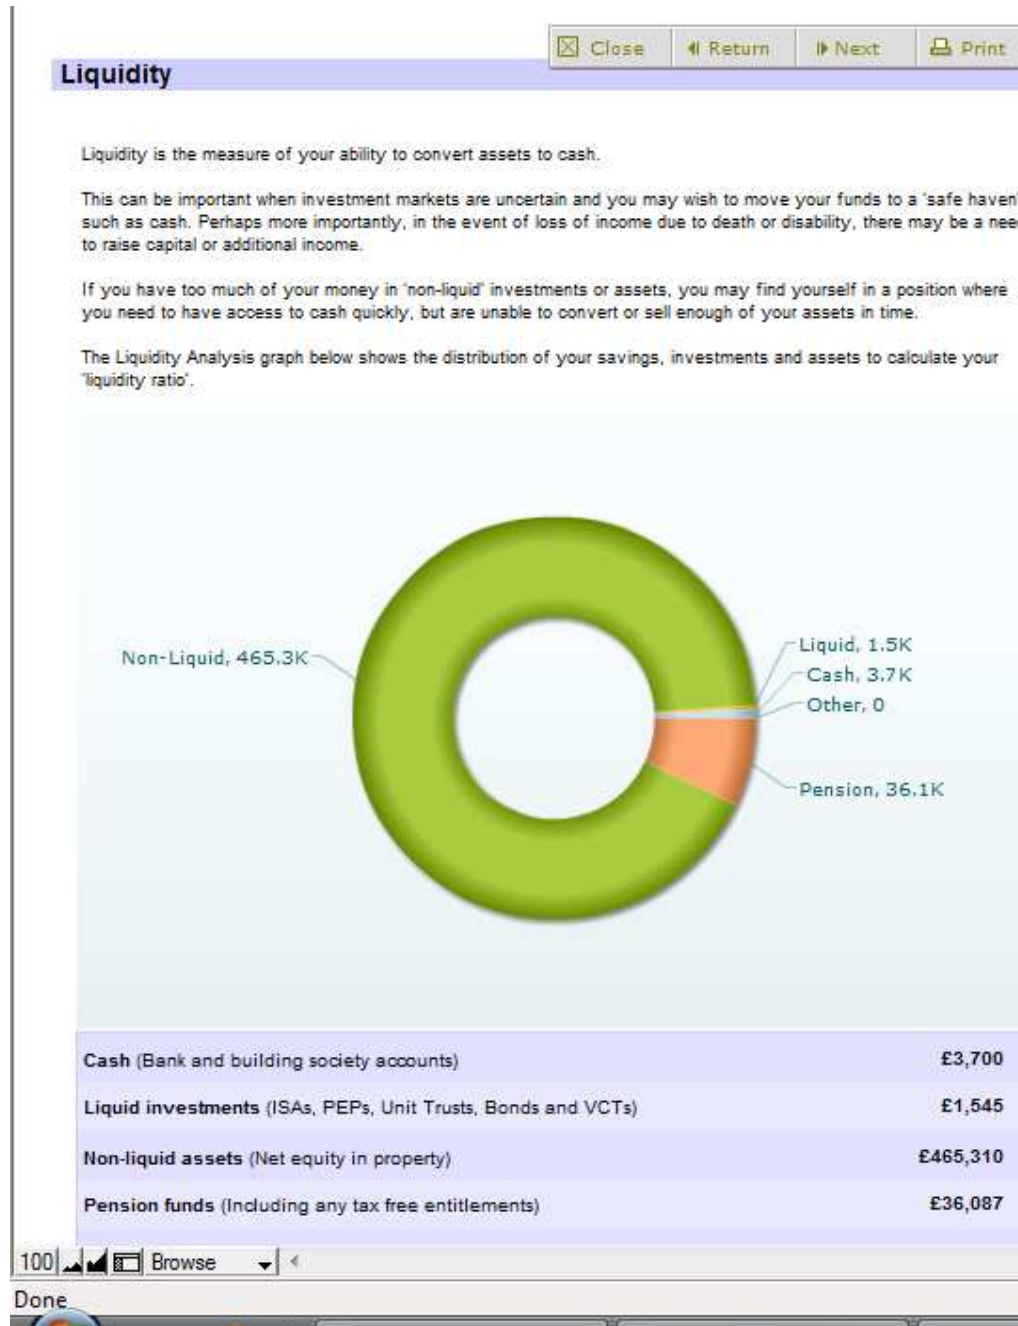

Your net worth is the difference between the value of what you own and the total amount that you owe. It's the amount of cash you'd have if you could sell everything and pay off all your debts today. It's a good measure of how wealthy you are.

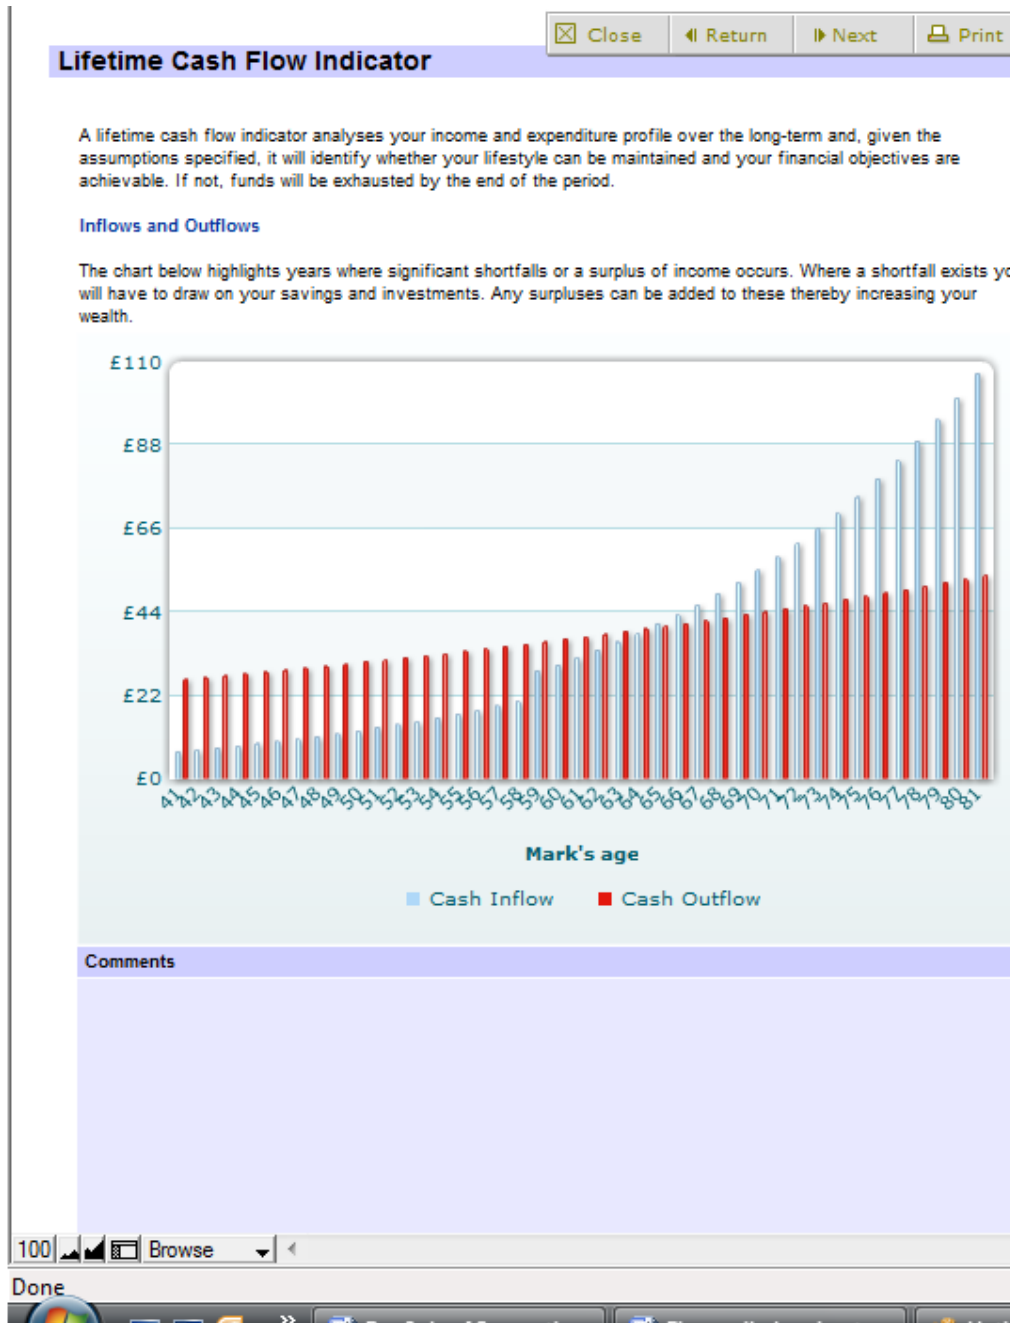

Knowing your net worth is important as a first step in setting your financial goals, and building your financial plan.

The Net Worth graph below illustrates the total value of your assets (including savings, investments, property, pension funds and personal assets) less your liabilities:

### Your current Net Worth

## Lifetime Cash Flow Indicator

### Cumulative Cash Flow

The inflows and outflows shown above can be added (or taken away) from your cash and liquid investments to calculate your cumulative financial position.

Having an income deficit is not necessarily a problem as long as you have sufficient cash and liquid investments which can be drawn on as a subsidy. However, in such circumstances your 'net worth' will fall and the position should be monitored to avoid draining these funds or running out of money altogether.

From this analysis, the financial plan will identify whether cash inflows should be increased or cash outflows be reduced to maintain your lifestyle and liquid investments at the desired level. The chart below shows cumulative value of your cash and liquid investments throughout your financial lifetimes:

## Planning For Disasters

Ensuring that you and your family are adequately provided for if disaster should strike should be given the same importance as achieving your lifetime objectives. There are three main potential disasters to cover:

- Premature death
- Critical illness: and
- Being unable to work through serious illness or disability.

In order to assure financial security in the event of the premature loss or incapacity of a wage earner, any surviving spouse or other financial dependents must have an adequate source of income or sufficient accumulated capital from which to extract an income.

Unless you have already accumulated sufficient capital, the only course of action is to opt for a sum of money to be delivered at the time it is most needed i.e. the death or incapacity of a wage earner. The concept of 'optioning' capital is nothing more than the idea of life insurance.

### Life assurance

Life assurance is designed to pay the beneficiaries a lump sum upon the death of the life assured (or the 1st or 2nd death of joint lives assured) within a given term or for Whole of life plans whenever you die.

### Critical illness cover

Critical illness cover is designed to pay a tax free capital sum if the policyholder is diagnosed with a critical illness such as:

Malignant and invasive cancer  
Heart attack  
Stroke  
Kidney failure  
Coronary artery by-pass surgery  
Major organ transplant  
Multiple sclerosis  
Permanent total disability

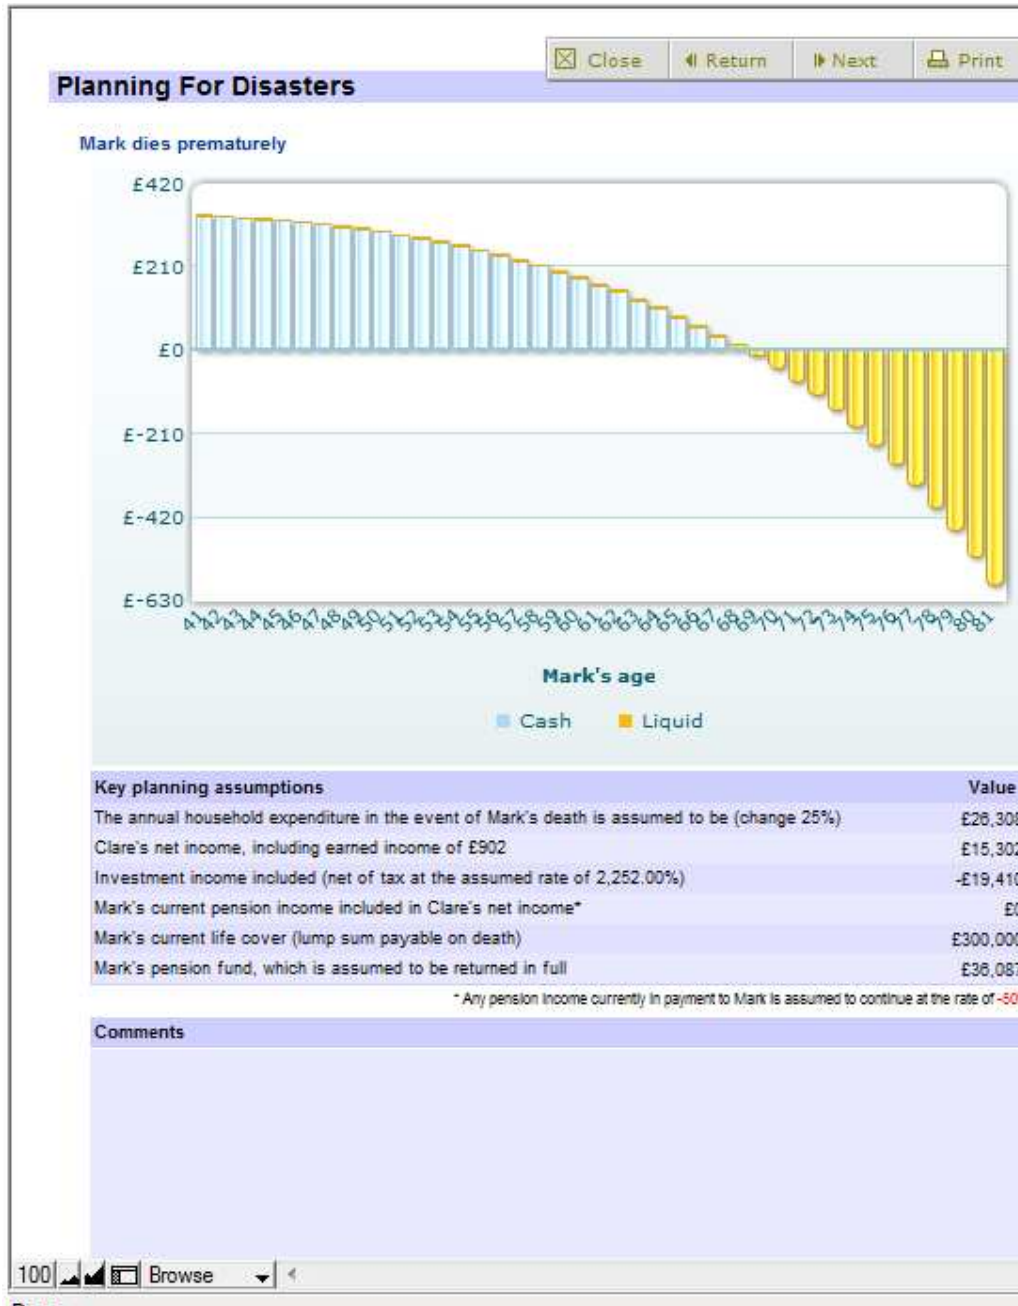

This list represents a small sample of the many conditions now covered under a modern critical illness policy.

### Income protection

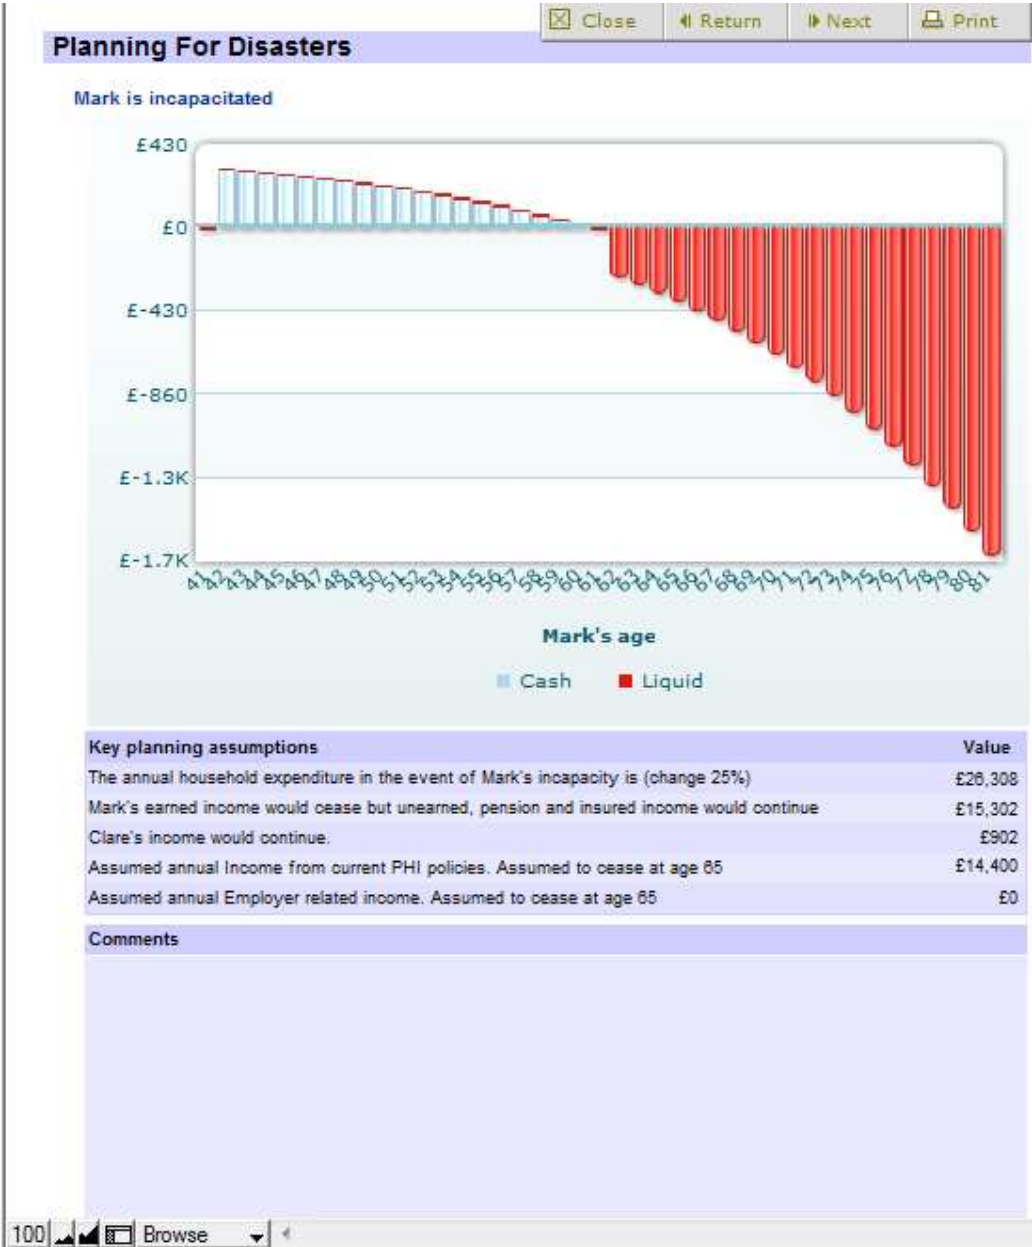

Income protection is designed to replace loss of earnings in the event of your inability to work as a result of sickness or accident.

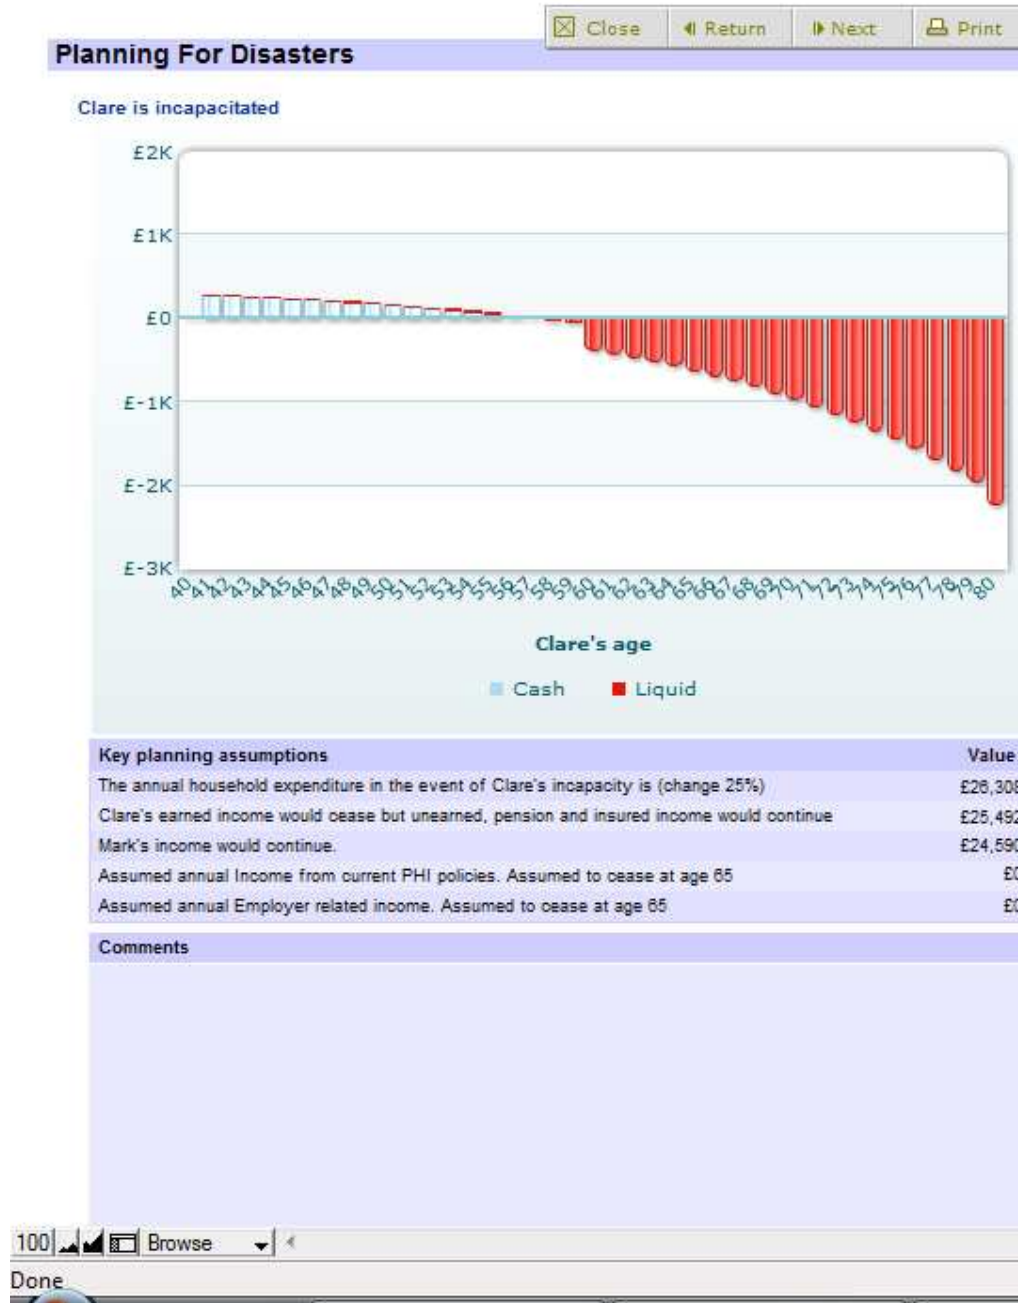

Benefit will be paid out after a deferred period of your choosing.

## Appendix A - Planning Assumptions

The following assumptions have been used in the report:

Assumption	% per annum
Inflation	3.00%
Increase in total income	5.00%
Investment return for pension funds	6.70%
Investment return for non pension fund assets	5.00%
Increase in residential property values (excl. income)	3.00%
Investment return for cash	2.50%
Effective rate of tax pre-retirement	2,252.00%
Effective rate of tax after retirement	22.50%
Annuity rate for Mark at 65	
Annuity rate for Clare at 62	
Increase in Mark's pension income in retirement	
Increase in Clare's pension income in retirement	
Reduction in expenditure on first death	25.00%
Reduction / increase in expenditure on incapacity	25.00%

Current cover	Mark	Clare
Life assurance	£300,000	£150,000
Annual sum assured (Family Income Benefit)	£14,400	£0
Critical illness	£150,000	£150,000
Annual income from employer	£0	£0
Annual Income from personal income protection policies	£14,400	£0
Value of pension funds	£36,087	£0

The plan assumes that the value of pension funds will be paid in full on death.

In the event of premature death, monthly household expenditure is assumed to be £2,192. The analysis assumes that this will increase annually in line with inflation.

In the event of incapacity, the plan assumes that ongoing monthly household expenditure will initially be £2,192 and that this will also increase annually in line with inflation.

## Appendix B - Assets And Liabilities

Close Return Next Print

The report is based on the following asset and liability values:

Asset	Mark	Clare	Joint
Cash accounts	£3,700		
<b>Non-liquid assets (excl Life Assurance)</b>	<b>£300,000</b>		<b>£300,000</b>
Private home	£300,000		£300,000
Other property			
Share in partnership / Business assets			
Private company shares			
Farmland / Woodland			
<b>Realisable assets</b>		<b>£1,545</b>	
Shares			
Fixed interest stocks			
Unit trusts / OEICs			
Investment trusts			
Personal Equity Plans / ISAs		£1,545	
Investment bonds			
Offshore bonds			
VCT / EIS			
National Savings			
Endowments / Savings plans (cash value)			
Pension funds	£36,087		
Other (personal effects)			
<b>Total assets</b>	<b>£339,787</b>	<b>£1,545</b>	<b>£300,000</b>

Liabilities	Mark	Clare	Joint
Mortgage on private residence	£0	£0	£134,690
Mortgage on other property	£0	£0	£0
Bank loans	£0	£0	£0
Building Society loans	£0	£0	£0
Credit cards	£0	£0	£0
Overdraft	£0	£0	£0
Hire purchase	£0	£0	£0
Other significant liabilities

## 5. RESEARCH AND THIRD PARTY INTEGRATIONS

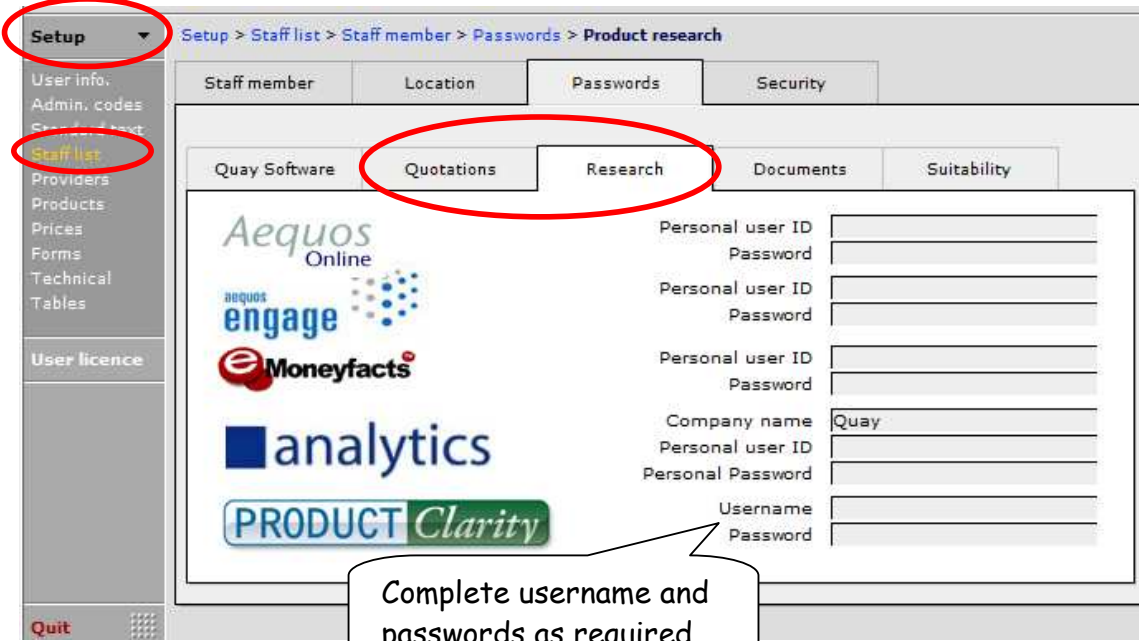

Research and third party integrations are found in two areas of CCD. In Clients > Holdings > Enquiry > Research and in the Fact find > Analysis > Research.

When using the third party integrations, basic client information is pulled through from CCD, Client Name, Address and Date of Birth.

With some integrations additional fund information will also be pulled through from CCD for analysis.

Once you have registered with your chosen research/quotation provider, you will need to enter your username and password in CCD. These are mainly recorded against individual staff records in the Setup module.

**Setup** Setup > Staff list > Staff member > Passwords > Product research

Staff member Location Passwords Security

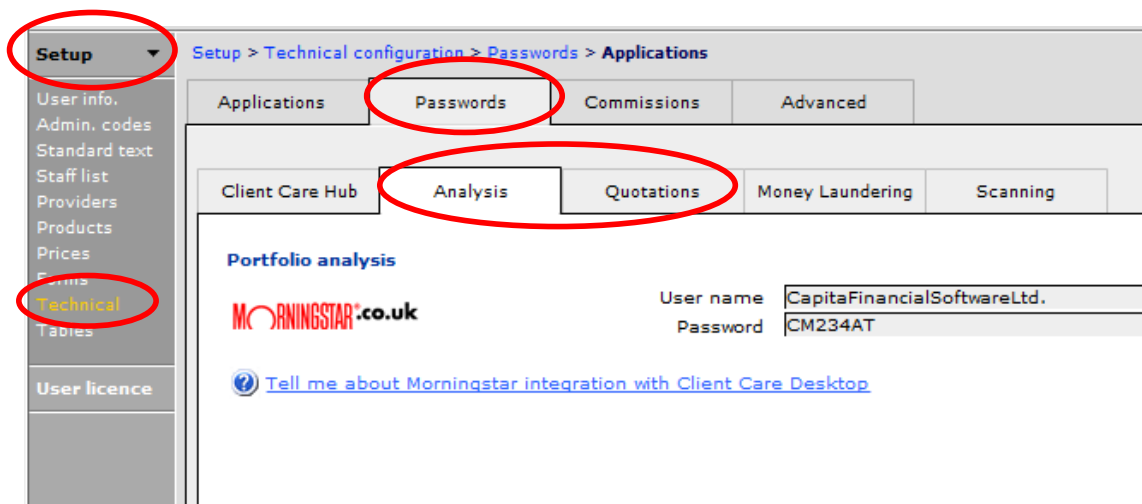

Quay Software Quotations Research Documents Suitability

Aequos Online  
aequos engage

Personal user ID  
Password  
Personal user ID  
Password  
Personal user ID  
Password  
Company name Quay  
Personal user ID  
Personal Password  
Username  
Password

Complete username and passwords as required.

The second area where passwords are stored, is in the Technical section of the Setup module.

Once you have registered with the research/quotation provider, one click enables you to navigate away from CCD to the provider site, open up the research/quotation engine and with your username and password pre-populate the basic client information.

It is not possible at the present time to bring back your research results into CCD. This is currently being worked on by our development team and any progress in this area will be announced in our monthly newsletter.
