8.01.18: Custom Dashboards

This release includes updates to the Dashboard feature upon login to GRID UI. Customizable dashboards allow you to choose a selection of charts to add to your homepage. Multiple dashboards can be created for a variety of functional purposes; for example, you could have an overview dashboard, a dashboard specifically for board members, Fortinet Dashboard for Firewall monitoring etc. Our experts have already created and added a Default Dashboard to your UI that we feel is useful to all customers.

Below are the simplified process steps to create your new customized dashboard:

1. Select Dashboards from the GRID UI homepage.
2. Select the + sign.
3. Name it, describe it, chose charts to be added.
4. Save.

Watch the video below for a quick run through on customizable dashboards!

Release Video

Your browser does not support HTML5 video.

For more instructions and details about custom dashboards, see our article, Dashboards .

What do I need to do?

No action is required to benefit from these updates. However, its always a good idea to visit the Downloads page to make sure your DVM and Windows Agent are up to date.
