Agentia SuperSMA

Investment Guide

1 April 2024

The Agentia SuperSMA PDS is issued by Diversa Trustees Limited ('the Trustee') ABN 49 006 421 638, AFSL 235153, RSE Licence No. L0000635 in its capacity as trustee of the Praemium SMA Superannuation Fund ('Agentia SuperSMA' or 'the Fund') ABN 75 703 857 864, an APRA-regulated superannuation fund. Praemium Australia Limited AFSL 297956 ('Praemium', 'we', 'our', 'us') ABN 92 117 611 784 is the Sponsor of the Agentia SuperSMA.

The Fund invests exclusively in the Separately Managed Accounts ARSN 114 818 530 scheme of which Praemium is the Responsible Entity ('the Scheme').

This guide forms part of the Agentia SuperSMA PDS ('PDS') dated 1 April 2024 and provides information on the investments available through the Fund. You should read this information before deciding whether to join the Agentia SuperSMA.

The information in this guide is of a general nature. It has been prepared without taking into account your investment objectives, circumstances, financial situation or needs. Before acting on the information in this PDS you should consider your own objectives, circumstances, financial situation and needs.

You should also consider seeking the advice of a licensed financial adviser. This publication is not intended to be, and should not be construed in any way as, investment, legal or financial advice.

The information in this guide is correct as at the date of publication. In the event of a material change occurring to any information contained in this guide, irrespective of whether it is adverse or not, the Trustee will notify existing members in writing within the time frames required by law. Updated information is available www.praemium.com/au/resources.

Additional explanation of Performance Fees

Performance Fees may be paid to a Model Portfolio Manager if a Model Portfolio adds value over a benchmark. The benchmark may be an index, an amount in excess of an index, zero or a specified return (for example 2% or the RBA cash rate).

The value added for each Model Portfolio relative to the benchmark is calculated for each Account each day of the performance period. Performance periods are calendar months unless otherwise stated in the Model Portfolio profile.

If the total value added for the period is negative no Performance Fee is payable and this amount is carried forward to the next period. A Performance Fee is only paid at the end of the performance period if the total value added for the period, plus any value added or carried forward from previous performance periods, is positive. Value added for a Model Portfolio includes all dividends but excludes any franking credits unless otherwise stated.

This means you will not pay a Performance Fee unless the total value added relative to the benchmark since inception for your Account is higher than at the end of any previous performance period.

Some Model Portfolios may impose an additional condition, which is that a Performance Fee is only paid where the return of the Model Portfolio, after payment of Performance Fees (absolute return), is positive. Where the return of the Model Portfolio is negative, the Performance Fee otherwise payable is carried forward.

The Performance Fee calculation is specific to each Account, so for any particular Model Portfolio over a performance period, some Accounts may be charged a Performance Fee while others are not, depending on the circumstances applicable to each investor's particular Account. For example, the timing of when the Account invested in a Model Portfolio will influence what, if any, Performance Fee is charged to the Account in respect of its allocation to that Model Portfolio. For Performance Fee calculation purposes, we consider only the Model Portfolio's performance and the weighting of your Account to the particular Model Portfolio. We ignore individual customisations and exclude the minimum cash component.

Examples of calculation of Performance Fee

The following examples are simplistic and for illustrative purposes only and may not reflect the actual Performance Fee charged to your Account.

Example 1. Value added over a benchmark

Assume an amount of \$100,000 is invested for 12 months, and the Performance Fee is calculated annually.

If the Model Portfolio's return for the year is 25% and the benchmark return is 20% then the excess performance is 5% and the Performance Fee would be calculated as follows:

- the investment return achieved is 25% of \$100,000 = \$25,000
- the benchmark return is 20% of \$100,000 = \$20,000
- value added (excess performance above benchmark) is (\$25,000 - \$20,000) = \$5,000

If the Performance Fee is 25% of excess performance above benchmark, then the fee charged by the Responsible Entity would be 25% of \$5,000 = \$1,250.

If the Performance Fee is 10% of excess performance above benchmark, then the fee charged by the Responsible Entity would be 10% of \$5,000 = \$500.

Example 2. Value added over an amount in excess of a benchmark

Assume an amount of \$100,000 is invested for 12 months, and the Performance Fee is calculated annually. If the Model Portfolio's return for the year is 25% and the benchmark return is 20% and the performance fee is based on the benchmark plus 2% then the excess performance is 25% - (20% + 2%) = 3% and the Performance Fee would be calculated as follows:

- the investment return achieved is 25% of \$100,000 = \$25,000
- the benchmark return plus 2% is (20% + 2%) of \$100,000 = \$22,000
- value added (excess performance above benchmark) is (\$25,000 - \$22,000) = \$3,000

If the Performance Fee is 25% of excess performance above the benchmark plus 2%, then the fee charged by the Responsible Entity would be 25% of \$3,000 = \$750.

If the Performance Fee is 10% of excess performance above the benchmark plus 2%, then the fee charged by the Responsible Entity would be 10% of \$3,000 = \$300.

Example 3. Performance must be greater than zero (absolute return)

Assume an amount of \$100,000 is invested for 12 months, and the Performance Fee is calculated annually. If the Model Portfolio's return for the year is -3% and the benchmark return is -5% then the excess performance is 2%. No Performance Fee would be payable as the Model Portfolio's return is less than 0%. However, the Performance Fee would be carried forward as follows:

- the investment return achieved is -3% of \$100,000 = -\$3,000
- the benchmark return is -5% of \$100,000 = -\$5,000
- value added (excess performance above benchmark) is (-\$3,000 - [-\$5,000]) = \$2,000

At the end of the next performance period \$2,000 will be added to the value added calculated for the new period. Though calculated daily the Performance Fees are assessed monthly, therefore you will only pay Performance Fees in respect of a Model Portfolio which added value over the month.

Holding restrictions applied to investments

Investment holding limits applied to Single Assets

The Trustee has set limits on how much you can invest in each individual managed fund, Exchange Traded Fund or listed security. For the security limit for individual managed funds, ETFs and Exchange Traded Bonds, please refer to the Single Assets List available www.praemium.com/au/resources.

The following holding restrictions apply to investments in listed securities. However, the Trustee reserves the right to place a different holding restriction on any security. The holding restriction may be temporary or permanent.

Listed securities holding limits

Security type	Single security limits
ASX Top 10 stocks	A maximum of 25 percent of a Member's Account balance can be invested in a single listed security holding within the ASX Top 10 stocks by market capitalisation.
Listed securities outside of the ASX Top 10 stocks but within the ASX Top 300	A maximum of 20 percent of a Member's Account balance can be invested in a single listed security holding for securities outside of the ASX Top 10 stocks but within the ASX Top 300 by market capitalisation.
Listed securities outside of the ASX Top 300	A maximum of 10 percent of a Member's Account balance can be invested in a single listed security holding for securities outside of the ASX Top 300.
Listed trusts including Listed Investment Companies (LICs), Exchange Traded Managed Funds (ETMFs) and Exchange Traded Funds (ETFs)	A maximum of 50 percent of a Member's Account balance can be invested in a single listed trust.
Listed interest rate securities*	A maximum of 20 percent of a Member's Account balance can be invested in a single listed interest rate security. An aggregated holding limit of 50% applies for investments in Exchange Traded Bonds.

*An interest rate security is a security that pays a fixed and/or floating rate of return. This return can be in the form of interest or dividends. The issuer (generally a listed company) usually promises to pay the holder a specified rate of interest (a coupon) during the life of the Interest Rate Security and to repay the face value (issue price or the principal) of the Interest Rate Security at a predetermined time (maturity date).

Investment holding limits applied to international listed securities

Predominantly the listed securities will comprise securities that are constituents of the MSCI World Index. The Trustee has imposed an upper holding limit of 20% on investment in any given international listed security available through the Fund. The Trustee reserves the right to impose a lower limit on any single security.

Investment holding limits applied to term deposits

The Trustee has imposed an upper holding limit of 95% on investment in any given term deposit available through the Fund. The Trustee reserves the right to impose a lower limit on any term deposit.

Single Assets

Managed Funds

Many managed funds as approved by the Trustee (for superannuation) or Responsible Entity (for non-super) are available as Single Assets using the APIR as the code. Managed funds may have additional fees as disclosed in the issuer's disclosure document/s. For more information please visit the issuer's website.

A list of available managed funds is accessible at www.praemium.com/resources.

Exchange Traded Products

Many Exchange Traded Products ('ETPs') as approved by the Trustee (for superannuation) or Responsible Entity (for non-super) are available as Single Assets using the ASX ticker as the code. ETPs may have additional fees as disclosed in the issuer's disclosure document/s. For more information please visit the issuer's website.

A list of available ETPs is accessible at www.praemium.com/resources.

ASX Listed Securities & Hybrids

Many of the largest 300 Australian Securities Exchange (ASX) listed securities and additional ASX listed securities approved by the Trustee (for superannuation) or Responsible Entity (for non-super) are available as Single Assets using the ASX ticker as the code.

A list of available securities is accessible at www.praemium.com/resources.

International Listed Securities

Many of the largest MSCI World listed securities and other international securities as approved by the Trustee (for superannuation) or Responsible Entity (for non-super) are available as Single Assets using the security and exchange code ticker as the code.

A list of available securities is accessible at www.praemium.com/resources.

Term deposits

A range of term deposits provided by Australian banks are available through your Nominated Representative or financial adviser.

Standard Risk Measure

This Investment Guide indicates the Standard Risk Measure 'risk band' for each Model Portfolio.

The Standard Risk Measure is based on industry guidance to allow members to compare investment options that are expected to deliver a similar number of negative annual returns over any 20 year period.

The Standard Risk Measure is not a complete assessment of all forms of investment risk, for instance it does not detail what the size of a negative return could be or the potential for a positive return to be less than a member may require to meet their objectives. Further, it does not take into account the impact of administration fees and tax on the likelihood of a negative return.

Members should still ensure they are comfortable with the risks and potential losses associated with their chosen investment option/s.

Risk Band	Risk Label	Estimated number of negative annual returns over any 20 year period
1	Very Low	Less than 0.5
2	Low	0.5 to less than 1
3	Low to medium	1 to less than 2
4	Medium	2 to less than 3
5	Medium to high	3 to less than 4
6	High	4 to less than 6
7	Very high	6 or Greater

Model Portfolio Profile: WB0001

Agentia Australian Equity Multi Manager

Investment objective: To outperform the S&P/ASX 200 Index (TR) after fees over a rolling period of 3 years and to provide moderate to high levels of tax effective income and capital growth over the medium to long term.

Investment description

WB Financial Management Pty Ltd (Multi Manager) will select a minimum of three Model Portfolios and a maximum of four Model Portfolios from the Australian Equity Managers that are available on Agentia.

Who is this option suitable for?

Investors who:

- seek tax-effective income from franked dividends plus capital growth from listed Australian securities over the medium to long term of three to five years;
- accept the risk of price fluctuations; and
- prefer portfolios with lower turnover to increase tax effectiveness over the medium term.

Model Portfolio Profile: WB0003

Agentia Income/Pension – Moderately Low

Investment objective: To maximise the probability of achieving returns of CPI (Inflation) +2% over rolling 4-year periods. The portfolio also aims to maximise income and minimise the risks of short-term falls in portfolio value subject to these parameters.

Investment description

Agentia Income/Pension Portfolios have been developed to meet the requirements of four different risk profiles. They each focus on income and yield. This model uses an asset allocation split of 35% growth assets and 65% defensive assets plus or minus 5%.

Who is this option suitable for?

Investors who:

- consider capital security to be somewhat more important than capital growth;
 - accept that avoiding fluctuations in capital value means a relative lack of capital growth;
 - accept a lack of capital growth in order to achieve capital security;
 - are likely to invest the majority of a portfolio in defensive assets, with a significant minority in growth assets;
 - know that a portfolio must have defensive assets to achieve a reasonable level of capital security, with diversification into growth assets to maintain capital growth; and
- have an investment time frame of 4 years plus – excluding income stream requirements.

Model Portfolio Profile: WB0004

Agentia Income/Pension – Balanced

Investment objective: To maximise the probability of achieving returns of CPI (Inflation) +3% over rolling 5-year periods. The portfolio also aims to maximise income and minimise the risks of short-term falls in portfolio value subject to these parameters.

Investment description

Agentia Income/Pension Portfolios have been developed to meet the requirements of four different risk profiles. This model uses an asset allocation split of 50% growth assets and 50% defensive assets plus or minus 5%.

Who is this option suitable for?

Investors who:

- seek a balance between capital growth and capital security;
- understand that investment strategies can lead to fluctuations in capital value;
- expect that capital growth and capital security must be compromised to achieve investment objectives;
- are just as likely to invest in defensive assets as growth assets;
- understand that portfolio diversification is important to achieve the investment outcome; and
- have an investment time frame of 5 years plus – excluding income stream requirements.

Model Portfolio Profile: WB0007

Agentia Accumulation/Growth – Low

Investment objective: To maximise the probability of achieving returns of CPI (Inflation) +1% over rolling 3-year periods. The portfolio also aims to maximise income and minimise the risks of short-term falls in portfolio value subject to these parameters.

Investment description

Agentia Accumulation/Growth Portfolios have been developed to meet the requirements of seven different risk profiles. This model uses an asset allocation split of 20% growth assets and 80% defensive assets plus or minus 5%.

Who is this option suitable for?

Investors who:

- wish to maximise capital security without the need for capital growth;
- view loss of capital as unacceptable and seek minimal volatility;
- will compromise on diversification for the security of defensive assets; and
- have an investment time frame of 3 years plus.

Investment objective: To maximise the probability of achieving returns of CPI (Inflation) +5% over rolling 10-year periods. The portfolio also aims to maximise income and minimise the risks of short-term falls in portfolio value subject to these parameters.

Investment description

Agentia Accumulation/Growth Portfolios have been developed to meet the requirements of seven different risk profiles. This model uses an asset allocation split of 90% growth assets and 10% defensive assets plus or minus 5%.

Who is this option suitable for?

Investors who:

- seek to maximise capital growth without considering capital security;
- disregard significant fluctuations in capital value;
- disregard capital security in order to achieve capital growth;
- are likely to invest the entire portfolio in growth assets to focus on a higher level of return; and
- have an investment time frame of 10 years plus.

Model Portfolio Profile: WB0013

Agentia Accumulation/Growth – 100% Growth

Investment objective: To maximise the probability of achieving returns of CPI (Inflation) + 6% over rolling 10-year periods after fees. The portfolio will be constructed to primarily focus on capital growth opportunities across growth asset classes but will also generate some income from growth assets.

Investment description

The Agentia Accumulation/Growth – 100% Growth Model employs a multi-manager approach to the management of the underlying investments.

The model has been designed to provide investment access to a diversified range of growth assets that can be used to blend with other investment asset classes to provide the investor with the level of risk v return that they specifically require. The underlying investment vehicles will be monitored to ensure that the investment continues to perform as expected. If necessary, underlying investment vehicles will be removed and/or replaced by the Model Manager.

The model will have exposure to a range of growth asset classes including property, Australian shares and international shares to provide the level of diversification and the risk/return characteristics that are appropriate for the investment objectives of the relevant portfolio.

Who is this option suitable for?

Investors who:

- are seeking a higher rate of return and the opportunity to achieve higher levels of capital growth over the long term;
- are comfortable with significant fluctuations in the capital value of their investments in the short to medium term;
- want to blend this growth model with a portfolio of defensive assets to achieve an overall asset allocation that provides them with the risk v return characteristics they require; and
- have an investment time frame of 10 years or more.

BlackRock Index – Top 20 Model

Investment objective: To match the total return (both income and capital growth) of the S&P/ASX Top 20 Index (TR), before taking into account Model Portfolio fees and expenses.

Investment description

The investment objective of this Model Portfolio is pursued by investing in a representative sample of shares that have been or are expected to be included in the S&P/ASX 20 Index (TR). The Index is comprised of the 20 largest and most liquid stocks in the Australian stock market.

Who is this option suitable for?

Investors who:

- seek exposure to Australian equities through a portfolio of large capitalization stocks;
- are happy to receive index returns without any active investment management; and
- accept the risk of significant price fluctuations.

Model Portfolio Profile: BR0005

BlackRock Equity Yield Focus Model

Investment objective: To provide the investor with a tax-effective and growing income stream sourced primarily from dividend payments by companies listed on the Australian Stock Exchange. Through investing in equity markets there is also the prospect of capital gains over time.

Investment description

The Model Portfolio invests in stocks which are expected to pay grossed-up dividend yields (including anticipated special dividends) in excess of the market average over the medium term.

Who is this option suitable for?

Investors who:

- seek a tax-effective income stream with some capital growth; and
- accept the risk that some volatility will be experienced.

Model Portfolio Profile: CA0205

CGWM High Growth Portfolio

Investment objective: To achieve a return of CPI + 4.5% per annum over rolling 7-year periods.

Investment description

This multi-asset portfolio invests across Australian equities, international equities, property, infrastructure, fixed interest, alternatives and cash. The size of allocations to each asset class will be actively managed in line with the Investment Committee's assessment of future risk and return prospects. The portfolio may engage specialist active managers and/or exchange traded funds within each asset class.

Who is this option suitable for?

Investors who:

- seek a high return above inflation but with a high tolerance for risk and are therefore willing to accept a high degree of volatility in their portfolio in order to achieve their long-term objectives;
- are willing to invest for at least 7 years;
- seek to grow their wealth to meet medium to long term goals and have a very low sensitivity to large short-term changes in the value of their investment;
- seek a portfolio diversified across a range of asset classes;
- seek a portfolio in which asset allocation is professionally and actively managed based on changes in market valuations and perceived future risks; and
- seek a portfolio with a mix of both active management and lower-cost passive investments.

Model Portfolio Profile: CL0103

Clime Multi-Asset High Growth Model

Investment objective: To match or outperform the benchmark over rolling 7-year periods by providing a high level of capital growth and low level of income through exposure to a diversified portfolio of predominantly equity investments.

Investment description

This model invests in all-cap Australian equities and managed funds. The focus is on asset allocation to a majority of growth assets (Australian and international equities) with a small exposure to defensive (fixed income, fixed interest, alternatives / property / infrastructure) assets that match to a High Growth investor risk profile. The model employs an active asset allocation approach, seeking to tilt the model to asset classes that exhibit the desirable return characteristics whilst balancing overall model risk.

Who is this option suitable for?

This model is designed for investors who are seeking a high level of capital growth with a low level of income.

Investors in the model portfolio will be prepared to sustain the higher volatility that is consistent with generation of higher returns.

Lonsec Diversified Direct Growth

Investment objective: To provide returns in excess of the Morningstar Australia Growth Target Allocation NR AUD over rolling 6-year periods.

Investment description

The diversified portfolios have been designed by Lonsec to provide optimal solutions for the various risk profiles consisting of growth and defensive assets based solely on the use of listed investment vehicles.

Who is this option suitable for?

Investors who:

- seek exposure to a diversified portfolio of growth and some defensive assets, consistent with Lonsec's Growth risk profile;
- seek a highly liquid, low-cost diversified portfolio solution;
- seek a tax-efficient and transparent portfolio solution; and
- seek to maintain beneficial ownership of their diversified portfolio.

Model Portfolio Profile: SM0001

Morningstar ASX Top20

Investment objective: To provide total returns that closely replicate the income and capital growth of the 20 largest capitalisation stocks listed on the ASX (before taking into account fees and expenses).

Investment description

This model is a passively managed portfolio which invests in the 20 largest (by market capitalisation) listed on the ASX. The portfolio is made up of exposures to direct equity securities. The portfolio seeks to give investors exposure to a large proportion of the market index performance over time.

Who is this option suitable for?

- Investors who:
- seek a portfolio of large capitalisation Australian equities;
- seek a low cost, liquid, passively managed portfolio exposed to the ASX;
- accept a portfolio that delivers returns that closely replicate the index of the top 20 ASX equities, without any active investment management;
- has a suitably high tolerance to risk; and
- accept that the price of underlying securities may fluctuate significantly.

Model Portfolio Profile: AE0002

Morningstar Australian Shares Income Model

Investment objective: To provide investors with greater risk-adjusted returns and a higher sustainable franked dividend yield relative to the S&P/ASX 200 Index (TR) in the long term.

Investment description

This is an actively managed concentrated portfolio consisting of our best income ideas in the S&P/ASX 200 Index. Portfolio holdings primarily consist of companies with greater than average sustainable net yield expectations and trade at attractive discounts to intrinsic value relative to the portfolio universe according to our research team.

Who is this option suitable for?

Investors who seek a reliable, above-market average income yield with moderate long-term capital growth relative to that of the performance benchmark.

Model Portfolio Profile: NA0001

Peak Navin Australian Industrial Growth

Investment objective: To achieve capital growth over the medium to long term. The portfolio also seeks to provide investors with some tax-effective income through the receipt of franked dividends. The aim of the portfolio is to outperform the S&P/ASX 200 Index (TR).

Investment description

The Model Portfolio invests in a concentrated portfolio of 15 to 30 stocks and excludes companies which the Model Portfolio Manager considers have low market liquidity or are speculative.

The portfolio maintains diversification across industry sectors. 80% of the Model Portfolio's equity exposure will be invested in leading Australian companies from the S&P/ASX 200.

Who is this option suitable for?

Investors who:

- seek capital growth and some tax effective dividend income;
- have a medium to long term investment horizon; and
- accept the risk of share price fluctuations but wish to moderate this risk by investing only in industrial shares.

Model Portfolio Profile: PE0002

Perennial Value Australian Shares

Investment objective: To provide a total return (after model fees) that exceeds the S&P/ASX 300 Index (TR), measured on a rolling three-year basis.

Investment description

The model invests in a diversified portfolio of listed, or soon-to-be-listed, Australian securities which Perennial Value believes will provide a combination of capital growth and income.

The model Portfolio will typically consist of approximately 45 Australian securities, with a minimum of 20 and a maximum of 70 shares.

Who is this option suitable for?

Investors who:

- have an investment horizon of five years or more; and
- are seeking exposure to a portfolio of Australian value-orientated companies.

Model Portfolio Profile: RA0005

Ralton Concentrated Australian Equity

Investment objective: To provide investors with long-term capital growth and some tax-effective income from a concentrated portfolio of Australian securities. The Model aims to deliver a return superior to that of the market over periods of five years or longer while at the same time seeking to minimise the risk of investment capital loss.

Investment description

The model is made up of a concentrated portfolio of Australian shares, aiming to provide investors with attractive long-term returns.

Who is this option suitable for?

Investors who:

- seek long term capital growth from a concentrated portfolio of Australian shares, with some tax-effective income;
- seek consistent total returns; and
- have a long-term investment horizon of at least five years and accept the risk of significant price fluctuations.

Ralton Dividend Builder

Investment objective: To provide investors with a consistent, tax-efficient and growing cash dividend yield, and long-term capital growth. The Model aims to deliver a return superior to that of the market over periods of five years or longer and an above market yield.

Investment description

The model invests in quality ASX-listed companies that are assessed as likely to provide investors with attractive long-term returns (capital growth plus above average yield and franking).

Who is this option suitable for?

Investors who:

- seek a consistent, above-average and tax-efficient cash dividend yield;
- seek long-term capital growth from a concentrated portfolio of Australian shares; and
- have a long-term investment horizon of at least five years and accept the risk of significant price fluctuations.
