

INTEGRATION WITH VERACROSS

We at Odin understand that in the modern school IT environment, the more integrations across different systems, the better!

As we experienced more and more of our clients moving to Veracross for their SIS, we realized it would benefit everyone if the Odin POS, MyKidsSpending, and Veracross platforms worked more closely together.

Integration description:

The integration is a Windows service that downloads Veracross student and faculty information from the Veracross API on an hourly basis. This means you simply keep your Veracross SIS data up-to-date and the Odin system will automatically pull down that information.

Features of the integration:

Using the Veracross API, Odin is able to access:

- Students
- Households
- Faculty
- Alumni

Future of the integration:

The development team at Odin is constantly working to improve our service and integrations. At the moment, the integration is limited to student and faculty information. In the future, we are keen to automate financial data integration to make the link between Odin and Veracross even more seamless. Don't worry though! We currently have a simple two-step process to share this data between systems.
