| GM/Chevrolet Automatic Engine Shutdown Timer |

SYSTEM OR PARTS AFFECTED

- 2020+ GM and Chevrolet vehicles manufactured with push button ignition.

OVERVIEW

Some 2020+ GM and Chevrolet vehicles with push button ignition may be equipped with automatic shutdown timers. These systems are designed to shut the engine off under following conditions:

- Vehicle parked and running, with the key fob inside the vehicle: up to 1 hour.
- Vehicle parked and running, with the key fob outside the vehicle: up to 1/2 hour.

As the VMAC system is designed to only operate while the vehicle is in "PARK", the shut down timer may be triggered while the VMAC is in use.

For more information related to the engine shutdown timer, refer to the vehicle owner's manual.

To request that the engine shutdown timer be deactivated, contact a GM or Chevrolet dealer.
