

MPmail Avanan

Anti-Phishing & Malware Protection

Anti-phishing and advanced malware protection for Microsoft 365 email, OneDrive and SharePoint, Teams and other collaboration apps.

TOTAL PROTECTION FOR ALL YOUR COLLABORATION TOOLS

Catch the sophisticated attacks that default and advanced security tools miss, while adding an invisible layer of security for cloud-based collaboration suites. A multi-layer, artificially intelligent solution that deploys in minutes and scales across enterprise architectures to prevent the attacks that bypass conventional security solutions.

TO ASSIST BUSINESSES THAT RELY
ON EFFICIENT CLOUD COLLABORATION:

MPmail Avanan

Key Benefits:

- ✓ Industry leading anti-phishing technology
- ✓ Zero-day malware & ransomware protection
- ✓ Protects against Account Takeover/ Insider Threats
- ✓ Data Leak Protection with context sensitive, policy work flows
- ✓ Automatic encryption of sensitive files without any new infrastructure
- ✓ Total protection of Microsoft 365 and other collaboration suites.

Introduction to MPmail and MPmail Avanan

Manage Protect offers advanced solutions to assist businesses that rely on efficient email communications. Eliminating email threats that sap productivity, increase storage, bandwidth and administrative costs and put their networks, and in turn their business, at risk. MPmail and MPmail Avanan were developed to meet the unique needs of businesses looking for an affordable, effective and easy to use email security solution with automatic updates that protect against the latest threats.

Targeted phishing attacks require targeted solutions

MPmail Avanan uses machine-learning models trained on attacks that get past Office 365, analysing over 300 indicators per message. SaaS integration provides role-based models and tight mailbox control to catch what external email gateways cannot. With the most advanced sandboxing and active content analysis in the industry. Quarantine threats before your users download them.

Data Loss Prevention

MPmail Avanan offers a structured Data Loss Prevention (DLP) approach, all in the cloud, activating in only one click. Avanan is the only data classification solution that applies the same policy rules across your cloud that you already use for your network and desktops.

- **Identify confidential files**
MPmail Avanan leverages the industry's most advanced tools to identify and mark files containing confidential, financial, and personally identifiable information, including: credit card numbers, and bank routing numbers.

• Prevent accidental shares

Avanan uses cloud-native controls to enforce granular share policies for individual files or folders based upon its contents and context. Files can be deleted, quarantined, or encrypted before they become security incidents.

• Multi-layered protection

Business-grade email spam and virus protection. Multi-layered strategy successfully keeps out 99% of harmful messages.

*"26% of organizations felt that improving data security with DLP is the most important thing they could do in 2019"**

More than just Email

The future of work has changed. Collaboration platforms are no longer just nice to have - they are critical to information sharing for most organisations today.

MPmail Avanan's technology is focused on Microsoft 365, however it's not limited purely to mailboxes. The modern SMB works together in the cloud. MPmail Avanan can search, manage and protect messages in MS teams, OneDrive, SharePoint Dropbox and many other platforms.

Manage data leakage, malware, and account takeover via a single threat intelligence interface

Total protection for Microsoft Teams

As more organisations move to Microsoft Teams (daily active users 70 million) so are hackers.

With the power of Avanan, Manage Protect is the first and only security vendor to provide malware, phishing and data leak protection for Teams.

Built for easy collaboration, Teams can be used just as easily to send malicious files and confidential information to the wrong people. MPmail Avanan records all events, workflows, and end-user activities. The system automatically copies logs of downloads, logins, file shares, bot actions, integrations, channel creations, domain changes, and more.

Security Features

- Every file sandboxed before downloading
- Quarantines the file, performs threat extraction and alerts user
- DLP security tools detect leaks of PCI, HIPAA, FERPA, PII, and other sensitive information
- Sophisticated, policy-based management
- Identifies risky cloud services connected to your approved SaaS accounts

About Manage Protect

Manage Protect is an Australian business committed to making email and the Internet a secure, safe, compliant and productive environment for businesses, through our network of trained and certified Partners across Australia & New Zealand.

Our suite of cloud-based managed services delivers true business grade, best-of-breed solutions focused on making business use of the internet (email, web and messaging) simple, secure and reliable.

Manage Protect enriches our clients' experience of email and the internet, while providing risk mitigation and policy enforcement for CEOs and CIOs.

As part of Manage Protect's dedication to providing the highest quality service, we proudly offer continued training to each of our partners, a dedicated portal where partners can access detailed information about each product 24/7 and the ability to receive first-hand experience using each of our products in your business for free or at a reduced price.

Organisations no longer need to purchase, deploy and manage countless point products. Simply define our corporate security, control and compliance policies and then focus on other core areas of your business with the peace of mind that the Internet, email and messaging services are fully "Managed" and "Protected".
