

Wegner's Evidence

Earth and Space Science
Unit 1

Wegener's Evidence

1. Mountain ranges on the eastern side of South America and western side of Africa line up.
2. Identical sets of rock layers were found deep underground on opposite sides of the Atlantic Ocean.
3. Similar fossils, including those of plants and land animals, have been found on different continents. (These are marked on the landmass cutouts using matching animal symbols.)
