Office Practicum Release Notes

Version 20.15 Build .12
(OP 20.15.12)

Release Availability

All Practices: February 24, 2022, following the standard availability announcement

Issue Resolutions

We've fixed an issue where CDAs received via Direct Messages were not opening as expected. You may have received an on-screen error message indicating a parsing error or that the XML page cannot be displayed. With this fix, errors are no longer displayed and you will be able to see and/or reconcile the CDA content as expected.
When printing Immunizations from Medical Records or within the Patient Chart, the report will no longer display a blank page or incorrect dates.
The DBISAM Engine Error that displayed when creating a School/Camp report, and a Well Visit has not been added to the Patient Chart, has been fixed. A message now displays "Report cannot be created without a documented well visit".
OP has fixed an issue where only the first 10 digits of a SNOMED code were included in a CDA. Full SNOMED codes will now be sent in a CDA.

Before submitting a case highlighting release issues, we recommend reviewing the **Support Trends** to see if your issue has already been reported. If it has, there is no need to create another case.

All content is subject to change.
