

Office Practicum Release Notes

Version 20.16 Build .14
(OP 20.16.14)

Release Availability

All Practices: June 6, 2022, following the standard availability announcement

Issue Resolutions

Diagnostic Test attachments showing incorrect patient: The caching of Diagnostic Test attachments (PDF/HTML) is now cleared when moving between patient charts and viewing attached documents to ensure the document shown is for the correct patient.

Old Lab Importer (DTI) showing incorrect requisitions: When a lab result is attached to a requisition, the result will be removed from the top panel and the requisition will be removed from the bottom panel. The focus will be on the next patient's result with available requisitions.

Old Lab Importer (DTI) and eLabs not displaying Received requisitions: Requisitions created by either clicking **Create Requisition from Selected** (Old Lab Importer/DTI) or the **Add** button (Unmatched tab) are now available to match to the returned lab results.

Before submitting a case highlighting release issues, we recommend reviewing the [Support Trends](#) to see if your issue has already been reported. If it has, there is no need to create another case.
