2 Enhancements to core features

These features are available immediately as part of your core Pathways licence.

2.1 Configuration

Default growth rate

You can set default growth rates for your organisation for use in the research journeys. Negative growth rates can be entered if required.

2.2 Holdings

Generic holdings

Holdings can be recorded for providers and products that do not appear on the Synaptic database, such as historic products no longer on sale. This will allow you to specify the asset allocation, add fees, charges and assumed growth rates to enable you to use the holding within the research journeys.

2.3 Portfolio Builder

Export fund list

Fund based Bespoke or MPS portfolios can be exported into a CSV file containing a list of the fund codes and weightings.

In-House Discretionary Portfolios

A portfolio asset allocation can be set, edited or removed if no longer required.

You can select whether you wish to use the fund asset allocation or the portfolio asset allocation. The Portfolio will use the selected allocation model in projections.

Multi-Asset and Insurance Distribution Directive Portfolio asset allocation

Asset allocation data can be supplied by the fund promoter and/or the FE fund feed. When asset allocation data has been supplied direct from the fund promoter, this will be used in preference to the data supplied by the FE fund feed.

All photographic images used in this presentation are under license – please do not copy, reuse or redistribute.

3 Enhancements to licensed features

These features require the relevant licence. To arrange a demo, click on the 'Request Access' button on the feature within Synaptic Pathways, speak to one of the team on 0800 783 4477 or email your request to hello@synaptic.co.uk.

3.1 Pathways Comparison and Ex-ante

Cost breakdown on Ex-ante report

The cost breakdown will be displayed for In-House Discretionary and Model Portfolios on the Ex-ante report, to include one off, ongoing and transaction costs.

Override alternative Share class Asset Allocation in Ex-ante or Ex-post journeys

Where a Share class Asset Allocation has been entered manually on an 'unlocked' fund, if an alternative share class is returned during the Ex-ante or Ex-post journeys with less than 100% allocation, the manually entered asset allocation will be applied.

3.2 Pathways Ex-post

In-House Discretionary Portfolios

The In-House Discretionary Portfolios can now be selected as part of an Ex-post review.

Override alternative Share class Asset Allocation in Ex-ante or Ex-post journeys

Where a Share class Asset Allocation has been entered manually on an 'unlocked' fund, if an alternative share class is returned during the Ex-ante or Ex-post journeys with less than 100% allocation, the manually entered asset allocation will be applied.

3.3 Pathways Switching

Growth rates

Default growth rates will be prepopulated if recorded at an organisational level and can be overridden in the switching journey. Negative growth rates can be entered if required.

Multiple Charges

When entering a ceding scheme, you can record multiple charges, level or indexed.

All photographic images used in this presentation are under license – please do not copy, reuse or redistribute.
