

## Video Stream Functionality in the Hybrid Ready Attendee App

### Overview

---

The EventsAir Attendee App is designed for full hybrid event functionality, allowing onsite attendees to interact with both virtual attendees as well as with presenters, both onsite and virtual.

With the Attendee App, you have functionality that allows attendees to view live session streams, video calls, video meetings, exhibitor video meetings and live support video meetings.

This functionality is an excellent way to increase engagement between attendees and providing additional ways for attendees to connect with other attendees, exhibitors, presenters, sponsors and staff.

### Enabling AIRCast

---

To enable this functionality, you will need to enable AIRCast in Event Preferences. AIRCast is the ultra-low latency streaming service that powers both OnAIR virtual programs as well as live streaming functionality in the EventsAir Attendee App.

Simply navigate to your Setup Panel and select Event Preferences. Near the bottom you will need to check the box confirming you are enabling the AIRCast Streaming Service to power your Attendee App live stream functionality.

Each month, you will be charged for every attendee using any of the live streaming functionality **in the Attendee App, and your billing is charged in 5-minute increments.**

**Only the functionality listed below uses AIRCast.** All other functionality, such as text messaging, live chats, live calls and everything is available at no cost.
