Clinical Release Notes 11.0.3
Maintenance Release

NextStep Solutions Version 11.0.3 Release Notes
All content is subject to change.

Release Date: January 19, 2023

Resolved Issues

eMAR
- When passing Late Medications, you will now be able to pass them using the Late Pass button.
- The Dosage field has been removed from the Add New Schedule window when adding a Treatment Schedule.
- When using the Late Pass button and selecting a late pass from the Late Passes grid, you will no longer have the ability to edit the Dosage field.

Face Sheet
- When spaces or tabs were included when entering a Client's name on the Face Sheet, it was causing them not to appear in search results. Spaces and Tabs will no longer be saved if included when adding the Client's name to a Face Sheet. The software will also now ignore spaces or tabs if included in the Search box.

Main Menu
- Long Client names were obscuring the Main Menu button on the left-side navigation menu. Client names will no longer affect the Main Menu button no matter their length.

Residential
- In Bed Management, some users were seeing no data in the Start Date and No of Days Allowed in Bed fields when adding a client to an already-occupied bed. Users can now expect these fields in Bed Management to populate data as entered.
