Resolved Issues

Issue: The AMT segment in secondary claims was showing the sum of all claims per client in each file if the “Send one day of service per CLM” box is checked on the payer setup. This was causing rejections for the COB being out of balance.

Resolution: The correct paid amount is now showing for each secondary claim in a claim file.

Issue: If a client had multiple services included in a claim file, and the “Send one day of service per CLM” checkbox was enabled, the billing engine was not grouping all services for one date of service into one claim if there was another service for another date as well.

Resolution: If the Send one Day of Service per CLM box is checked in the payer setup, all services for one day of service will now show in the same claim even if there are services for other dates being included in the claim file.
