Release Date: April 3, 2023

Resolved Issues

Dispensing

- The label was being cut off when printing bottle labels. This resolves the issue where dose labels were printing with no location or phone number.
- The ability to change a Dispensing Site (Utilities Menu, Setup) has been removed in order to prevent potential data issues.
- Agencies now have the ability to assign a default alert template for all new orders via a new checkbox 'Default for All New Orders' found in the Manage Alert Templates screen.
(Dispensing Module-> Utilities-> Alert Templates-> add OR edit template)
- When expiring a medication order (by creating a Suspend alert for a given client), only the end date of the active medication order is updated, NOT affecting the end date of any previous dose orders.
