Clinical Release Notes 11.2.3
Maintenance Release

NextStep Solutions Version 11.2.3 Release Notes
All content is subject to change.

Release Date: June 25, 2023

Resolved Issues

eMAR
- Titration schedules for medications in the Medication Plan can now be scheduled and reviewed in eMAR as expected.
- Pass History will now be correctly sorted when sorting the history by date.

Forms
- The speed with which forms load when the forms are using field referencing has been improved.
- When exporting Face Sheet data from the Export Form Data tool, the columns were not aligned with the correct heading in the .xls format. All columns are now aligned with the correct heading.

IBHRS
- A new report has been created for IBHRS errors making the format more legible and users are now able to filter columns.

MOST
- An error has been resolved where some users were not able to access MOST.

Reminders List
- The Reminders List will now load faster.

User Privileges
- An issue has been resolved in which the External User Privileges were not showing in the Maintain Users screen for appropriate users.

Web Scheduler
- When printing from the Web Scheduler users are now taken directly to the PDF window. From there they are given the option to print or download. We have eliminated the unnecessary preview screen.
- Some customers were seeing errors in the scheduler when navigating to the profile setup and then attempting to access another page in setup. We were able to fix this error and users will no longer receive an error when navigating from profile to another setup option.
