Patient Engagement

Next Generation Patient Image Sharing

Instantly share patient images, clips, and reports. Easily engage with patients to improve acquisition, satisfaction, and retention. Tricefy™ is a secure and compliant cloud-based solution that allows you to share within seconds. Faster than burning CDs, cheaper than USB thumb drives, and more environmentally friendly than printing paper.

Improve Patient Care

Put your patients at the center of their care to improve loyalty, retention and satisfaction.

Access Remotely

Access all studies remotely on any device, with unlimited license users.

Customized Branding

Increase visibility with the logo on patient images and in the mobile application.

Unique Workflow

With one button push, send studies directly from your imaging device to your patients.

Eliminate bottlenecks

Reduce image-sharing delays and costly image-exchange methods.

Get Compliant

Incorporate best practices and meet requirements - with a full audit trail.

Photo: Dr. Steve Rad, MD, FACOG is a highly specialized expert in Obstetrics, Gynecology, Maternal-Fetal Medicine and High Risk Pregnancies in the United States and uses Tricefy™ for sharing images with his patients.

Ditch the Disc

Step by step for healthcare professionals

Enter the patient's email or mobile number into the patient information page on your imaging device.

Send images by selecting the designated print key or ending the examination, depending on your preferred workflow.

Patients are able to access their files in the Tricefy™ for Patients app or any web browser.

Done!

Easy as 1,2,3...

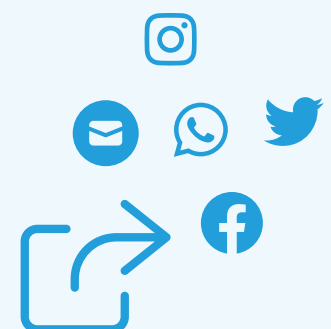

Step by step for patients

The patient taps on the link that they received from their healthcare provider, shared through SMS or email.

Images and reports can be accessed in the Tricefy for Patients app or any web browser in high quality.

Patients can share their images with friends and family through their favorite social media apps.

Done!

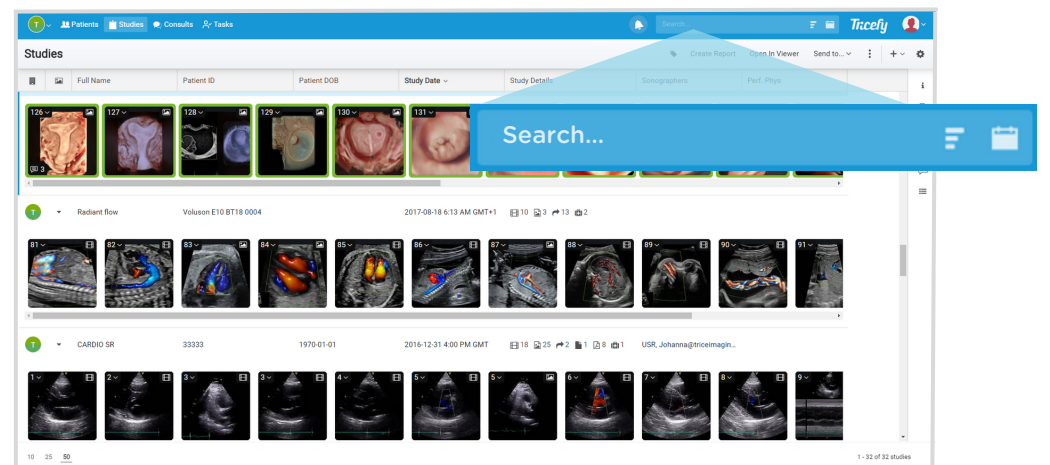

Cloud PACS

Secure Long-Term Archiving

Tricefy™ provides healthcare professionals with a flexible platform to securely store and manage studies, all without the conventional hardware cost and maintenance. Satisfy compliance requirements with worry-free, unlimited, long-term cloud storage. Remote access and a feature-rich DICOM viewer give you the flexibility to read, report, dictate, and work remotely while collaborating with colleagues and specialists from around the world.

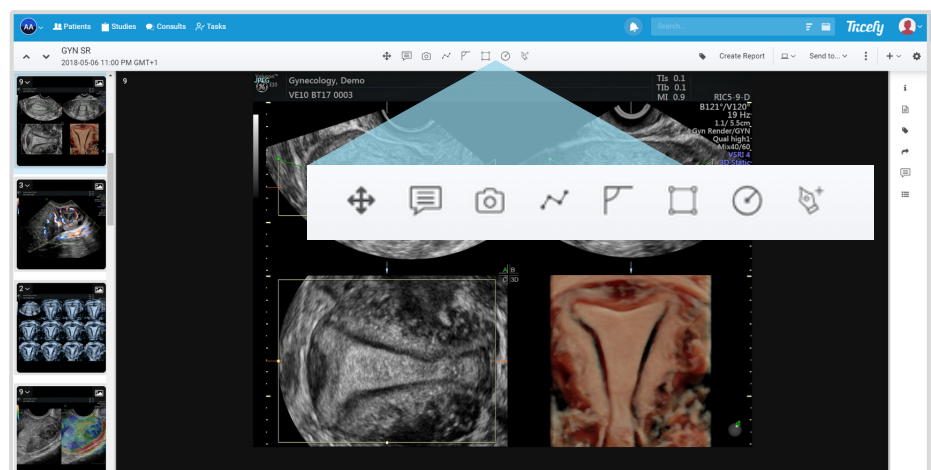

Organize & Search

Examinations populate in your studies list in chronological order. Further organize your imaging database by applying labels and statuses to studies. Easily search for studies by patient name, ID, date range, status, or label.

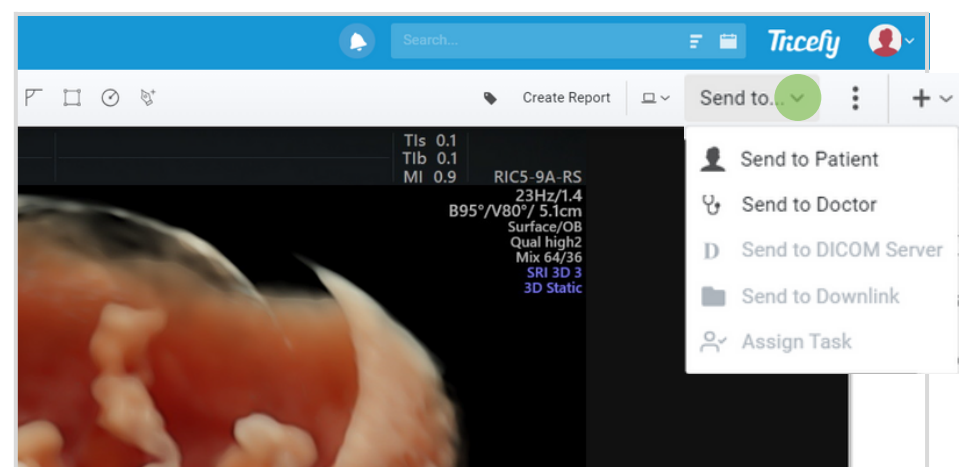

Review Examination

The intuitive DICOM viewer makes it easy to interact with images and reports. Post processing capabilities include zoom, annotations, and measurements.

Coordinate Care

Send images and reports to colleagues and specialists for second opinions and referrals with full audit trail. Grow your network by easily sharing through secure links with physicians outside of your Tricefy™ account.

& Flexible

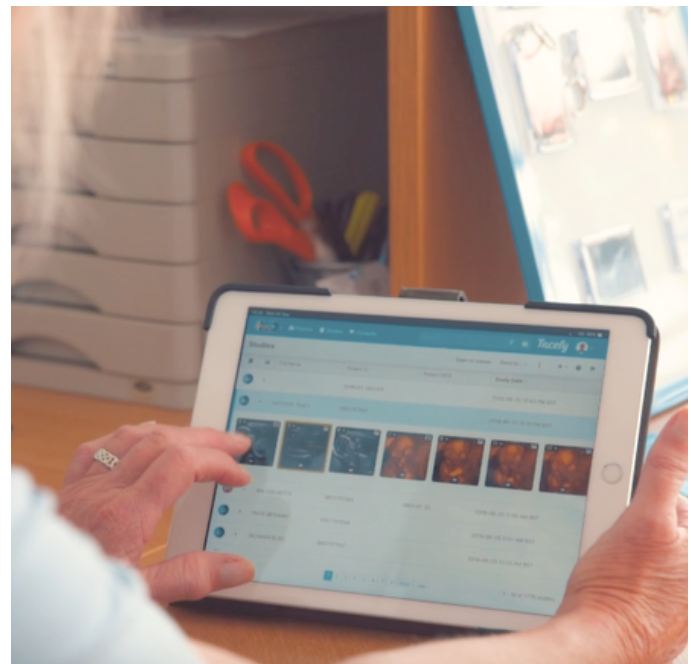

Compliant
& Secure

Networking

Instantly build remote, multi-disciplinary teams. Capture essential patient information and route it automatically and securely through the cloud for immediate, remote collaboration and interpreting of images. Create a connected ecosystem across a healthcare network, driving collaboration, facilitate patient care, as well as revenue capture of all billing charges related to encounters.

Each location only requires a copy of the Uplink software and an internet connection, enabling the automatic routing of exams between separate geographic locations.

Integration

Leverage industry-standard APIs such as HL7 and JSON to integrate interfaces for any HIS, EMR, EHR, RIS, and PACS. Give physicians the tools to improve patient outcomes by seamlessly connecting to patient records and imaging across the entire enterprise. All essential clinical information is accessible in one centralized location. Improve clinical workflow by eliminating data silos and manual processes to get immediate access to information when you need it.

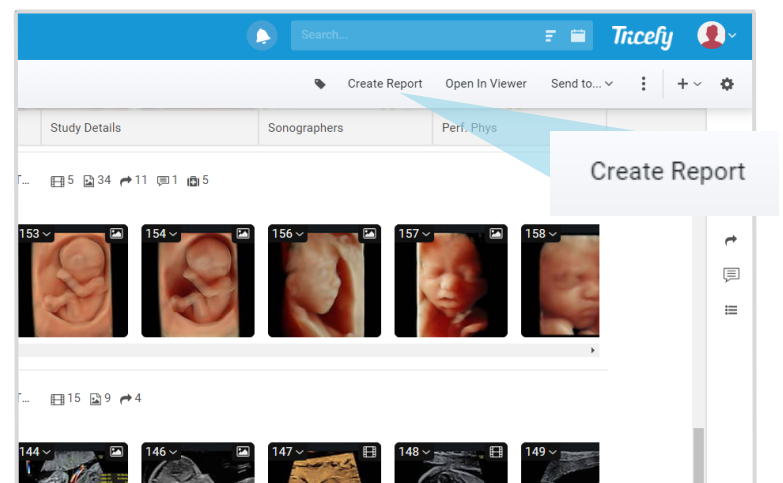

Adaptive Reporting

Adaptive Reporting gives you standard or customized reports to meet the specific needs of your practice. Automatically have your Ultrasound measurements and data transferred to save time and reduce error. Review. Finalize. Done. Share reports with your EMR, an outside provider, or your patients - instantly.

Simplify Your Reporting Workflow

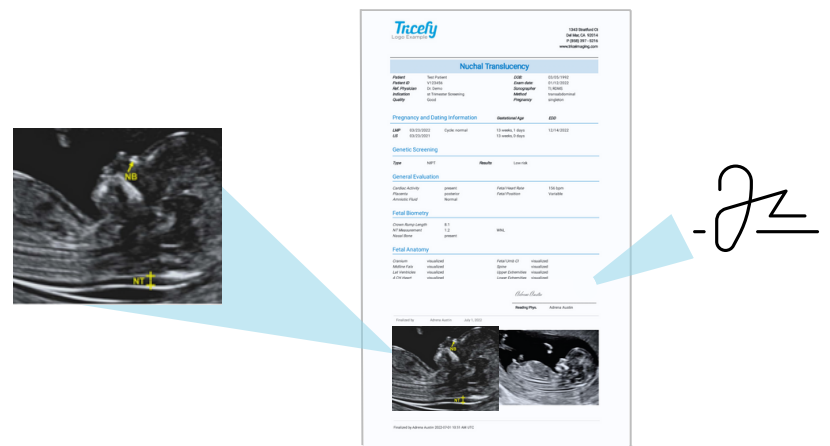

Select

Select 'Create Report' from the DICOM viewer or your studies list and choose the report you would like to complete.

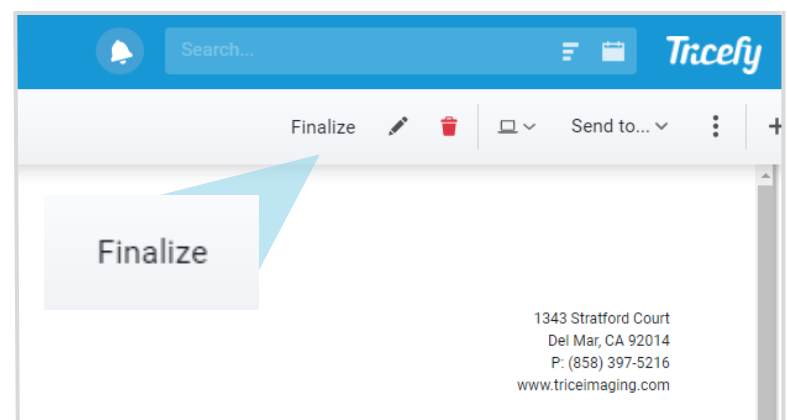

Review

Review the measurements and data that have automatically been transferred to the report. Drag and drop images and add any additional information if needed.

Finalize

Your electronic signature is automatically added to the finalized report. Finalized reports can be sent to an EMR, another healthcare provider, or a patient.

Select from standard reporting templates

Interfaces with EMR automatically

A company on a mission

At Trice, we are always looking for new areas where our technology could simplify medical processes and improve health care around the world. Our mission is to use our technology to improve health care globally while incorporating what we learned into future releases. We are currently active in several projects around the world.

Security is our highest priority

Tricefy™ is an innovation with multiple patent features, an FDA Class I medical device, and ISO 13485:2016 certified. Our security practices comply with the most widely accepted standards and regulations. The Tricefy™ cloud service is designed with multiple layers of state-of-the-art security across a scalable, secure infrastructure.
