- Application Corrections2
- Shared Data Field displays an extra space on the invoice template.....2
- Eforms is throwing an error2
- Sales Packages with Recurring don't work on Work Orders2
- PO issues2
- eForms data type "Contract"2

Application Corrections

Resolved Issues
<p>Shared Data Field displays an extra space on the invoice template</p> <p>We corrected an extra space shown on the invoice template by removing the blank space if the billing first name is blank.</p>
<p>Eforms is throwing an error</p> <p>We resolved an error on eForms caused by user rights on the API endpoint.</p>
<p>Sales Packages with Recurring don't work on Work Orders</p> <p>When creating a new work order and adding a sales package with an RMR, the RMR was initially included. But if the user navigated to the RMR tab, the tab cleared out any preexisting RMRs. Now the tab checks to see if a sales package is selected, and if so, then the RMR tab will not clear out the existing RMR.</p>
<p>PO issues</p> <p>We fixed an issue on purchase orders found when users would create a purchase order, add parts, and add a memo, causing the parts to get cleared instead of keeping them.</p>
<p>eForms data type "Contract"</p> <p>When adding an eForm, the drop down list for Data Type no longer shows Contract as an option unless on Managely Enterprise.</p>
