

Managely Release Notes

September 2024

Version 5.3.41.28

MANAGELY[®]

Application Corrections

Unable to delete invoice [00120531]

We fixed an error when deleting Invoices that were associated with a work order.

Statements [00120807]

Users reported issues with the number shown for statements printed and emailed and the number of past due. In addition, past due accounts were showing late fees on the statements but not on the accounts. We fixed the customer statement generation logic when updating customer late fees, so the number of statements printed, emailed, and past due are correctly shown. Also, accounts show late fees as expected.

Cannot print statement on customers page [00120820]

We fixed an issue where users could not print a statement on the Customer page.
