

Taking the Pain out of Clinical Image Management

Tricefy is a specialized **Cloud PACS** supporting **Ultrasound, X-ray, and C-arms** to seamlessly connect patients and providers across the care network.

With our **easy-to-use platform**, save time and resources by simplifying workstreams with EMR integration, long-term cloud storage, standardized reporting, clinical collaboration, and more. Eliminate administrative tasks like EMR updates, and focus on what matters most, supporting patients through all stages of their health journey.

Backed by 15 years of expertise in the healthcare industry, we transform the complexities of clinical image management into streamlined care. With vendor neutrality, remote installation, and no dedicated onsite hardware, getting started has never been easier.

V2 Product Page Pain, May 2024

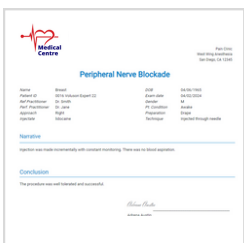

Interoperability

Tricefy offers standardized interfacing for HL7 HIS, RIS, EMR, EHR, and PACS systems. Easily integrate with ModMed, eClinicalWorks, Athena, and more.

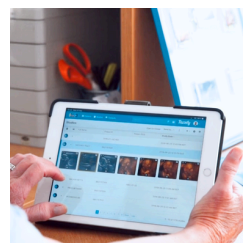

Long Term Storage

Meet legal requirements for long term examination storage with safe and secure archiving. ISO 27K and AES-256 encryption keep data safe - all with a full audit trail.

Personalized Reporting

Standardize reporting protocols and documentation by sending measurements and data from the imaging device into a custom report.

Remote Access

Work where you are. Remote access and a feature rich multi-modality viewer support telehealth and access to critical care information at all times, on any device.
