

Imaging at your Fingertips

EchoNous and Trice have partnered to deliver a seamless, end-to-end clinical workflow solution that harmonizes point-of-care ultrasound and clinical image management.

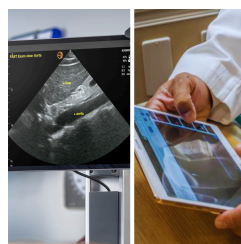

EchoNous is pioneering a new POCUS era with Kosmos—a fusion of cart-based system quality, handheld affordability, and AI enhanced efficiency. When integrated with Trice’s cloud-based PACS, Tricefy—enabling long-term storage, secure image routing, clinical collaboration, and remote access—this solution streamlines the entire clinical workflow, from imaging intake to diagnosis. Together, EchoNous and Trice create a platform that empowers providers across the care network to deliver superior care with unmatched convenience and efficiency.

Access Remotely

Work where you are. Remote access and a feature rich multimodality viewer support telehealth and access to critical care information at all times, on any device.

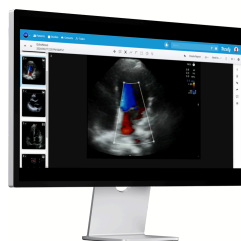

Interoperability

Tricefy offers interfacing for standard HIS, RIS, EMR, EHR, and PACS systems. Compliance with ISO27001 and AES-256 data encryption ensures data security with a full audit trail.

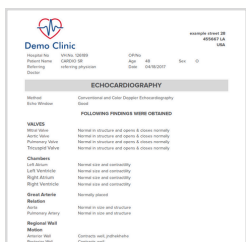

Clinical Collaboration

Easily collaborate with colleagues and multidisciplinary teams across clinical sites to improve productivity and patient outcomes.

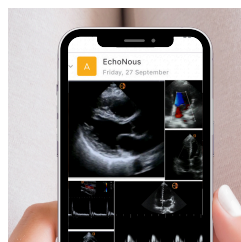

Long Term Storage

Meet legal requirements for long term examination storage with safe and secure archiving. Easily search, retrieve, and organize your imaging database.

Personalized Reporting

Improve accuracy and speed by automatically sending data and measurements from the imaging device into a custom report.

Seamless Patient Sharing

Instantly share medical images and reports with patients to improve satisfaction, and retention. Add your clinic branding to improve acquisition.
