Modernizing Military Healthcare

Dr. Julie Freeman

31 MAR 2025

Digital Front Door (DFD+)

DFD+ is a collaborative prototyping effort, part of the innovation program, where DHA has partnered with the Defense Innovation Unit on the DFD+ which spans across three lines of Lines of Effort:

LOE 1 Patient Experience

DHA will leverage commercially viable solutions that enable frictionless access to care and services for beneficiaries; seamless integration with the existing Electronic Health Record; and complete integration with wearables and personal health sensors devices.

LOE 2 Care Team Experience

DHA will leverage commercially viable solutions to establish and maintain an ecosystem that removes administrative, cognitive, and repetitive burdens from the workforce. This ecosystem will include applications such as digital assistants that use generative AI to recognize speech and assist with workflows.

LOE 3 Data Management Support

DHA will leverage commercially viable solutions to make intelligent and actionable use of data, including those data that are contained in the MHS Information Portal as well as future data streams such as sensor data from patient-owned and patient-maintained devices. This LOE will include artificial intelligence agents that summarize patients' records and draw actionable insights.

DFD+ will leverage advanced technologies and features that enhance and expand the capabilities of the initial DFD across the FYDP.

Advanced Data Analytics

DFD+ uses predictive analytics for personalized care recommendations and real-time health monitoring.

AI & Machine Learning

DFD+ integrates AI-driven chatbots, machine learning for early diagnosis, and treatment suggestions.

Enhanced Interoperability

DFD+ ensures seamless data sharing across different healthcare systems and devices.

Personalized Patient Experience

DFD+ offers customizable interfaces and tailored health programs.

Integrated Care Coordination

DFD+ facilitates enhanced collaboration among healthcare teams and integrated care plans.

My Military Health Overview

Improving Health and Building Readiness. Anytime, Anywhere — Always
