

# HEALTH OFFICE STAFF

Infinite Campus empowers school health officials to efficiently document, track, and manage all student health information. From monitoring chronic conditions to recording office visits and administering medications, Campus provides the tools needed to maintain accurate records and support student well-being.

## STUDENT HEALTH

- **Conditions** – The Conditions tool lists all medical conditions reported for each student. Staff can add, update, or remove conditions.
- **Immunizations** – The Immunizations tool tracks if students meet state-required vaccine guidelines. It supports compliance reporting, documentation uploads, and recording vaccine waivers.
- **Health Contact Log** – This tool allows nurses to document communications sent to parents/guardians about a student visit.
- **Medications** – The Medications tool stores and manages student prescription information. Nurses can schedule medication appointments and record details.
- **Office Visits** – Schools can track scheduled and unscheduled office visits and document them: observations, treatments, interventions, etc.

## HEALTH MANAGEMENT

- **Health Office Calendar** – Displays all scheduled and unscheduled visits. Nurses can view in-progress and completed visits and access full details per student. *Scheduled medication visits automatically appear on the calendar each time a dose is required.*

## REPORTS

- **Immunization Summary Report** – Generates a list of students and their compliance status with state-required vaccinations.
- **Health Conditions Summary Report** – Provides a count of all active student health conditions in a selected date range, helping identify trends across a school population.
- **Health Office Visits Report** – Lists all student visits per date or across a date range.
