

We're Here to Help!

Online Services provides training, troubleshooting, and support for the college's *diagnostic and accessibility-creation tools*. Here are some tools that can help improve your course:

Blackboard Ally (Diagnostic Tool)

Integrated directly into D2L Brightspace, Ally is a diagnostic tool, not a compliance tool. It scans course content to gauge accessibility, provides faculty with tips for improvement, and automatically generates alternative file formats for students.

YuJa Lumina (Video Platform)

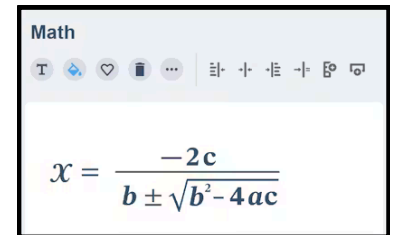

YuJa Lumina generates starting-point captions and transcripts for video and audio materials. Faculty can then easily edit these for accuracy to ensure everyone can access media content.

Equatio, for Math & Science

By generating alt text for equations, Equatio supports low-vision, visually impaired, and blind students. Faculty and students can also speak math or write by hand using touch or mouse, and Equatio converts it into digital math.

VTAC Accessibility Section

The Virtual Teaching Assistance Center (VTAC) offers several articles that provide guidance on creating accessible content. Topics include PDF files, Microsoft Office documents, the tools listed above, and more.
